ABSTRACT	xxix
I. INTRODUCTION	1
A. Historical background of *Streptococcus pneumoniae*	2
B. Global epidemiology, carriage, and serotype distribution of *S. pneumoniae*	4
C. Virulence determinants and mechanisms of pathogenicity	8
1. Polysaccharide capsule	9
2. Pneumolysin	10
3. Hydrogen peroxide	10
D. Prevention, antibiotic resistance, and pneumococcal vaccination	12
E. Experimental models for studying pneumococcal host-pathogen interactions	16
F. Rationale and knowledge gaps	18
G. Objective, research questions, and hypothesis	21
1. General objectives	21
2. Specific objectives	21
3. Research questions	22

UNIVERSITAS GADJAH MADA
Genomic Characterization of a Multidrug-resistant Streptococcus pneumoniae Isolate from a Pediatric Patient alongside Mechanistic Studies of Pneumococcal Pathogenesis in In Vitro and Ex Vivo Models
Tiara Putri, Prof. Dr. Budi S. Daryono (UGM) dan Prof. Dr.rer.nat. Sven Hammerschmidt (University of Greifswald)
Universitas Gadjah Mada, 2026 | Diunduh dari http://etd.repository.ugm.ac.id/

4. Hypothesis 22
5. Novelty 23

II. MATERIALS 25
A. Microorganisms and culture media 26
1. *Streptococcus pneumoniae* strains 26
2. Culture media for bacterial cultivation 28
B. Clinical sampling materials and molecular diagnostic reagents 28
1. Sampling materials 28
2. SARS-CoV-2 detection reagents 29
C. Antimicrobial susceptibility testing and genomic DNA extraction 29
1. Antimicrobial susceptibility testing materials 29
2. DNA extraction reagents 30
D. PCR and sequencing reagents 30
1. Serotyping PCR reagents 30
2. Whole-genome sequencing reagents and software 31
E. Eukaryotic cells and culture media 32
1. Cell lines 32
2. Cell culture media and supplements 33
F. Clinical patients, animals and tissue model materials 34
1. Experimental models 34
2. Reagents for PCLS generation and maintenance 34
G. Infection-associated reagents and treatments 35
H. Antibodies, stains, and mounting Reagents 36
1. Reagents for epithelial cell immunofluorescence staining 36
2. Reagents used for PCLS immunostaining and clearing 37
I. Solutions and buffers used in cell culture and staining 38
J. Laboratory equipment and software 39

III. METHODS 41
A. Part I – Clinical isolate recovery and pneumococcal characterization in Rumah Sakit Akademik, Yogyakarta, Indonesia. 42
1. Study design and ethical approval 42
2. Study setting and participant recruitment 43
3. Participant information 44
4. Nasopharyngeal sampling 44
5. SARS-CoV-2 detection 45
6. Pneumococcal isolation and identification 46

UNIVERSITAS GADJAH MADA
Genomic Characterization of a Multidrug-resistant Streptococcus pneumoniae Isolate from a Pediatric Patient alongside Mechanistic Studies of Pneumococcal Pathogenesis in In Vitro and Ex Vivo Models
Tiara Putri, Prof. Dr. Budi S. Daryono (UGM) dan Prof. Dr.rer.nat. Sven Hammerschmidt (University of Greifswald)
Universitas Gadjah Mada, 2026 | Diunduh dari http://etd.repository.ugm.ac.id/

a. Culture-based isolation and identification 46
b. Molecular biological methods 47
c. Antimicrobial susceptibility testing 49
7. Genomic DNA extraction for whole-genome sequencing .. 50
8. Whole-genome sequencing and bioinformatic analysis 51
B. Part II – Experimental models of pneumococcal–host cell interactions (Germany) 53
1. Microbiological methods 53
a. Growth and cultivation of *S. pneumoniae* 54
b. Cryopreservation of *S. pneumoniae* 54
c. Growth studies of *S. pneumoniae* 55
d. Determination of colony-forming units (CFU) 55
e. Preparation of *S. pneumoniae* for infection assay 56
f. Pneumococcal capsule staining 57
2. *In vitro* cell culture models 58
a. Subcultivation and preparation of epithelial cell lines 58
b. Cryopreservation of cell lines 60
c. Cell counting and preparation for *in vitro* infection assays 61
d. Preparation and equilibration of transwell epithelial - endothelial cell barrier models 61
e. TEER measurement 62
3. Generation of *ex vivo* murine tissue models (PCLS)..... 64
4. *In vitro* exposure and treatment of cell culture models 67
a. Adherence to and uptake of pneumococci by 16HBE cells 67
b. Immunofluorescence staining of *S. pneumoniae* attached to 16HBE cells 68
c. Double immunofluorescence staining of infected 16HBE cells 70
d. Pneumococcal adhesion assay in HIBCPP and iHCPEnC cells 70
e. Cell viability analysis of HIBCPP and iHCPEnC cells using the RealTime-Glo™ MT Assay 72
f. Tight junction immunofluorescence staining of HIBCPP cells 73
g. LDH cytotoxicity assay of infected HIBCPP cells 74
h. Permeability assay of HIBCPP–iHCPEnC co-cultures using FITC-Dextran 76
5. *Ex Vivo* exposure and treatment of murine tissue models 77

UNIVERSITAS GADJAH MADA
Genomic Characterization of a Multidrug-resistant Streptococcus pneumoniae Isolate from a Pediatric Patient alongside Mechanistic Studies of Pneumococcal Pathogenesis in In Vitro and Ex Vivo Models
Tiara Putri, Prof. Dr. Budi S. Daryono (UGM) dan Prof. Dr.rer.nat. Sven Hammerschmidt (University of Greifswald)
Universitas Gadjah Mada, 2026 | Diunduh dari http://etd.repository.ugm.ac.id/

a. Infection of PCLS with *S. pneumoniae* and determination of bacterial growth..... 77
b. MTS viability assay of PCLS..... 77
c. Immunofluorescence staining of PCLS..... 78
d. Embedding of PCLS for light sheet fluorescence microscopy..... 79
e. Ethyl cinnamate (ECi)-based tissue optical clearing..... 80
f. Light sheet microsopy of cleared lung tissue..... 80
6. Statistical analysis..... 81

IV. RESULTS 83
A. Recovery and characterization of a multidrug-resistant *S. pneumoniae* isolate during pediatric SARS-CoV-2 screening .. 84
1. Study cohort and SARS-CoV-2 screening outcomes 84
2. Pneumococcal detection and phenotypic antimicrobial susceptibility profile 86
3. Genomic characterization of the multidrug-resistant 19F ST320 isolate 89
B. Experimental models to investigate pneumococcal infection and host-pathogen interactions 95
1. Growth characteristics and visualization of *S. pneumoniae*..... 95
2. Cell culture models..... 98
a. Infection of 16HBE epithelial cells with *S. pneumoniae*.... 98
b. Infection of HIBCPP and iHCPEnC cells with *S. pneumoniae*..... 107
c. Comparative adherence assays using wild type and mutant strains of *S. pneumoniae* in HIBCPP and iHCPEnC models..... 108
d. Viability assay to evaluate cellular responses following infection using pneumolysin (Ply) and hydrogen peroxide (H_2O_2) exposure..... 111
e. Tight junction protein staining to assess barrier integrity..... 115
f. Quantification of cytotoxicity using the LDH assay..... 115

UNIVERSITAS GADJAH MADA
Genomic Characterization of a Multidrug-resistant Streptococcus pneumoniae Isolate from a Pediatric Patient alongside Mechanistic Studies of Pneumococcal Pathogenesis in In Vitro and Ex Vivo Models
Tiara Putri, Prof. Dr. Budi S. Daryono (UGM) dan Prof. Dr.rer.nat. Sven Hammerschmidt (University of Greifswald)
Universitas Gadjah Mada, 2026 | Diunduh dari http://etd.repository.ugm.ac.id/

g. Measurement of TEER as a control parameter during co-culture establishment..... 117
h. Evaluation of barrier permeability using FITC-Dextran assay..... 118
3. Pneumococcal infection in murine PCLS..... 122
a. Measurement of PCLS viability using MTS assay..... 122
b. Assessment of bacterial adherence in PCLS..... 122
c. Visualization of pneumococcal infection in cleared lung tissue using light sheet microscopy..... 124

V. DISCUSSION..... 126
A. Recovery of a multidrug-resistant pneumococcal isolate during pediatric SARS-CoV-2 screening..... 127
B. Genomic and phenotypic characterization of the multidrug-resistant 19F ST320 isolate..... 129
C. Molecular mechanisms of antimicrobial resistance and the emergence of high-risk pneumococcal clones..... 133
D. Virulence, pathogenicity islands, and genomic adaptation in the 19F ST320 lineage..... 137
E. Mechanistic insights into pneumococcal–host interactions..... 141
1. Growth kinetics confirm comparable baseline fitness across strains..... 142
2. Time-dependent and capsule-dependent patterns of pneumococcal association with 16HBE cells..... 143
3. Double immunofluorescence analysis distinguishes predominantly extracellular pneumococcal localization in 16HBE cells..... 144
4. Quantitative confirmation of predominantly extracellular pneumococcal localization..... 145
5. Adhesion of pneumococcal mutants to HIBCPP and iHCPEnC cells depends on infection dose, strain background, and host cell context..... 147
6. Pneumolysin and hydrogen peroxide synergistically compromise cell survival and barrier integrity..... 150
7. Pneumococcal cytotoxicity in HIBCPP cells is time-dependent and influenced by pneumolysin, capsule and SpxB..... 155
8. Measurement of TEER as a control parameter during co-culture establishment..... 158
