LIST OF TABLE xii
LIST OF ABBREVIATIONS xiii
ABSTRACT xiv
CHAPTER 1 INTRODUCTION 1
1.1 Background 1
1.2 Problems Definition 5
1.3 Scopes of Problem 6
1.4 Aims of The Thesis 6
1.5 Research Implications 7
CHAPTER 2 LITERATURE REVIEW 8
2.2 Metal AM Applications 8
2.3 VAT Photopolymerization (SLA/DLP) 10
2.3.1 Printing Step in Vat Photopolymerization Technology 11
2.3.2 Vat Photopolymer Technologies 12
2.4 Metallic Material Selection for AM Process 17
2.4.1 AM Technology to Produce Metallic-based Material 20
2.4.2 Commercial Photopolymer Resin 24
2.4.3 3D Model of Lattice Structure 24
2.5 Post Processing 25
2.5.1 Maintaining shape during sintering using a fire-retardant additive 25
2.5.2 Debinding temperature and Sintering temperature 25
2.5.3 Sensitization, corrosion in austenite steel. 26

2.6. Experiment in Preliminary Study 26
2.7 Approaching Similar Research Topic 33
2.8 Research Gap 34
CHAPTER 3 THEORY OF THE RESEARCH 34
3.1 Material Stainless Steel 36
3.1.1 The AISI Stainless Steel Clasification and Numbering Standard 38
3.1.2 AISI Suffix Letters (Composition Modifiers) 39
3.2 Influence Parameter in Metallic Stereolithography 40
3.2.1 Particle Size Distribution 40
3.2.2 The Composition of the High Solid Loading 41
3.2.3 Light Transmittance though a solid layer 43
3.2.4 Layer Thickness Printing Parameter to the Mechanical Characteristics 45
3.2.5 Find the optimal light exposure time variable 46
3.2.6 Adhesion performance 48
3.2.6 Porosity performance 48
3.3 The Theoretical of Powder Metallurgy (PM) 49
3.3.1 Thermodynamic Driving Force: Surface Free Energy 49
3.3.2 Atomization of Stainless Steel Powder 49
3.3.3 Bonding Materials of the Green Body (The Binder System) 50
3.3.4 Work principles of solidification photopolymer resin as binder system 50
3.3.5 Debinding: Removing the bonding material 53
3.3.6 Sintering: Final Densification 53
3.3.7 The molecular mechanism in Sensitization phenomenon 54
CHAPTER 4 RESEARCH AND METHODOLOGY 56
4.1. Research Flowchart 56
4.2 Illustration of Research Methodology and Materials 58

4.3 Tool and Measurement Devices 68
CHAPTER 5 RESULT AND DISCUSSION 75
5.1. Approaching Solution for Maintain the Shape During Sintering 75
5.2 The optimum parameters using Resin Exposure Range Finder (RERF) 80
5.2.1 The printing area measured by image processing. 81
5.2.2 Light transmitance 82
5.2.3 Water contact angle 82
5.2.4 Surface roughness of FEP film 83
5.2.5 Simplifiy geometry model 85
5.2.6 The experimens result 86
5.2.7 Design of Experiment (DoE) Taguchi Method 86
5.2.8 ANOVA analysis for the average value 90
5.3 The Influence of the green body content in the print and sinterability. 92
5.3.1 Analysis of the powder size. 93
5.3.2 The SS 316L weight fraction within the printind layers. 94
5.3.3 Light Transmission Test 95
5.3.4 Water Contact Angle test 96
5.3.5 The Influence of weight fraction to the final product after sintering 97
5.4. The Printing accuracy of the metallic porous using DLP 3D Printing. 103
CHAPTER 6 CONCLUSION AND RECOMMEDATION 106
6.1 Research Findings and Conclusions 106
6.2 Recommendation for Future work 107
