

### **Abstract**

Much of the Public-Private Partnership (PPP) research in Indonesia focuses more on the aspect of infrastructure, while the Jakarta EPrix (F.E.) event is considered a new kind of Partnership. There is little research on how it can interact with a Discourse Network and how the actors are identified, and what actors think about PPP. The purpose of this research is to highlight the view of the actors and their standings in the Jakarta EPrix event. This research seeks to explain who the actors are and what they think about the PPP itself. The researcher will also identify the actors and their standings on the event, referring to the previous study's actors' literature review classification. This research will then measure the concept or reasoning why they would agree or disagree with the event in the form of a chart. There will then be extensive use of academic literature regarding PPPs. This research will identify official and unofficial PPP actors' opinions regarding Public Services delivery and identify their opinion. Those issued identification risks potentially lucrative project spelling is in dispute tuition. An application within the PPP implementation resulted from the performance project weather in achieving the aim. Following that, the stakeholder's integration is set as an implication of PPP implementation. The result provided aligned with each conceptual framework in indicating the actors, their standings, and their concept or reasoning on their agreement.
