

Table of Contents

TABLE OF CONTENTS	VII
LIST OF FIGURES	IX
LIST OF TABLE	X
1. BACKGROUND	1
1.1. Problem Definition	5
1.2. Research Objectives	6
1.3. Research Questions	7
1.4. Scope and limitation of the study	7
2. LITERATURE REVIEW AND THEORETICAL BASIS	9
2.1. Watershed Hydrological Modelling	9
2.1.1. Classification of watershed hydrological models	9
2.1.2. Rainfall-runoff models on a watershed	11
2.2. (SWAT) Soil And Water Assessment Tool	12
2.2.1. Brief description of SWAT	12
2.2.2. Model capabilities	12
2.2.3. Model limitations	13
2.2.4. Applications of SWAT Model	14
2.2.5. Applications of SWAT Model in Indonesia	15
3. MATERIALS AND METHODS	26
3.1. Study Area	26
3.2. Upper Serayu Catchment	26
3.2.1. Rainfall and Climate	28
3.2.2. Geology	29
3.2.3. Landuse	31
3.3. Serang Watershed	33
3.3.1. Rainfall and climate	34
3.3.2. Geology	35
3.3.3. Landuse	37
3.4. Upper Bogowonto Watershed	38
3.4.1. Rainfall and Climate	39
3.4.2. Geology	40

3.4.3. Landuse	42
3.5. Research Methodology	44
3.5.1. Data Needed	45
3.5.2. Data Acquisition	46
3.6. Soil Water Assessment Tool – SWAT Model	52
3.6.1. Infiltration and Surface Runoff	54
3.6.2. Erosion And Sediment Yield	56
3.6.3. SWAT Hydrological Modeling	57
3.6.4. Model Performance Criteria	57
4. RESULT	62
4.1. SWAT Hydrological Model Perfomance in Upper Serayu Watershed, Serang Watershed and Upper Bogowonto Watershed	64
4.1.1. Model Calibration	64
4.1.2. Model Performance	65
4.2. The use of Global dataset on SWAT modeling	81
4.3. Sensitivity Analysis	87
5. CONCLUSION AND RECOMMENDATION	92
5.1. Conclusion	92
5.2. Recommendations	95
5.3. Main lessons learned and closing remarks	96
5.4. Challenges ahead	96
REFERENCES	98

List of Figures

Figure 1. Effect of land-use change on landscape processes.....	2
Figure 3. Simplified classification of models (adapted from Chow et al., 1988).....	10
Figure 4. Study of SWAT 2008 – 2018.....	14
Figure 5. SWAT frequency analysis based on annual rainfall prior to research area.....	15
Figure 6. Study area	26
Figure 7. The upper Serayu catchment.....	27
Figure 8. Relief map of Upper Serayu Catchment.....	28
Figure 8. Rainfall station and weather station in Upper Serayu Watershed.....	29
Figure 9. Geological map of Upper Serayu Watershed.....	31
Figure 10 Landuse in Upper Serayu Watershed.....	32
Figure 11. Serang Watershed.....	33
Figure 12. Slope in Serang Watershed.....	34
Figure 13 Geological Map of Serang Watershed	36
Figure 14. Landuse map of Serang Watershed.....	38
Figure 15. Slope Map of Upper Bogowonto Catchment.....	39
Figure 16. Land-use map in Bogowonto Upper Catchment	43
Figure 17. Research flowchart.....	44
Figure 19 DEM of the study area	52
Figure 16 Schematic diagram of the hydrologic cycle (adapted from Neitsch et al. (2005)).....	53
Figure 23. Modeling timeline.....	57
Figure 24. Calibration at Mrica gauging Station.....	64
Figure 25. Discharge After calibration at Mrica gauging station 2009.....	65
Figure 28 Monthly Discharge on each land-use in Upper Serayu Catchment	66
Figure 29. Surface Runoff based on each sub basin – Upper Serayu Catchemnt	67
Figure 30. Surface Runoff on each HRU – Upper Serayu Catchement.....	68
Figure 31. Sediment Yield on each land-use – Upper Serayu Catchment.....	69
Figure 32. Sediment Yield on each sub basin – Serayu Upper Catchment.....	70
Figure 33. Sediment Yield on each HRU - Upper Serayu Catchemnt	71
Figure 34. Runoff on each landuse in Bogowonto Upper Catchment.....	72
Figure 35. Runoff distribution on each sub-basin, Bogowonto Upper Cathment.....	73
Figure 36 Runoff distribution based on HRU, Bogowonto Upper Cathment.....	74
Figure 37. sediment yield in Bogowonto Upper Catchment prior to Landuse.....	75
Figure 38 a. Sediment yield on each sub-basin, Bogowonto Upper Catchment,	76
Figure 39 Runoff on each landuse, Serang Watershed.....	77
Figure 40 Runoff on each sub-basin, Serang Watershed.....	77
Figure 41 Runoff based on HRU, Serang Watershed.....	78
Figure 42 Sediment on each landuse, Serang Watershed	79
Figure 43 Sediment on each landuse, Serang Watershed	80
Figure 44 Sediment on each landuse, Serang Watershed	81
Figure 45. Model validation comparison between different input. a. Soil from soil survey (SOILLAB) and Weather data from ground measurement, b. Soil from soilgrids.org (SOILGRID) and Weather data from ground measurement, c. Soil from soil survey (SOILLAB) and Weather data from Weather Generator, d. Soil from soilgrids.org (SOILGRID) and Weather data from Weather Generator	82
Figure 46 Observed and simulated discharge using soil map from laboratory test.	83
Figure 47. Observed and simulated discharge using soilgrids data from https://soilgrids.org	84
Figure 48. Spatial distribution of discharge flow from simulation using different data input	85
Figure 49. Spatial distribution of discharge flow from simulation using different data input.....	86
Figure 50. Discharge comparison on 3 watersheds based on landuse.....	87
Figure 26. Parameter sensitivity analysis for Runoff.....	88
Figure 27 Parameter sensitivity analysis for Sediment.....	90
