SYMBOLS AND ABBREVIATION xxv
ABSTRACT xxxii
RÉSUMÉ xxxiv
ABSTRAK xxxvi
I. INTRODUCTION 1
A. Background 1
B. Research Questions 7
C. Research Objectives 8
D. Research Authenticity 10
E. Research Outcomes 19
II. LITERATURE STUDY 21
A. Biology of *Hevea brasiliensis* 21
1. History of rubber cultivation 21
2. Biology of *Hevea brasiliensis* 23
3. The laticifer cell 25
4. The lutoid 27
B. Rubber Biosynthesis and Latex Harvesting System 28
1. Rubber biosynthesis pathways 28
2. Rubber biosynthesis-related genes 30
3. Latex harvesting practice 31
4. Ethephon Stimulation 34
C. Tapping Panel Dryness (TPD) 37
1. TPD symptom 37

UNIVERSITAS GADJAH MADA
Study of Physiological Parameters and Antioxidants in Response to Harvest Stress and Tapping Panel Dryness in Latex of Hevea Brasiliensis (Willd. ex A. Juss.) Muell Arg.

2. Two types of TPD 39
3. Reactive oxygen species (ROS) related to TPD 40
4. Genomic and transcriptomic analyses of TPD 41
D. Latex Diagnosis (LD) 43
1. LD parameters 43
2. LD parameters evolution in relation to the harvesting system 44
3. LD application in rubber research and plantations 45
E. Latex Antioxidants and Scavenging Enzymes 49
1. Ascorbate biosynthesis 49
2. Glutathione biosynthesis 50
3. Tocotrienol biosynthesis 51
4. Redox mechanism in ROS scavenging process 53
5. Variability of antioxidants in plant and *Hevea brasiliensis* 55
F. Theoretical Background 55
G. Hypotheses 57
III. RESEARCH METHODOLOGY 59
A. Research Scope 59
B. Research Sites 59
C. Experimental Design and Planting Materials 60
1. Clonal variation of latex antioxidants in five recommended rubber clones 60
2. Study of the effect of tapping and stimulation on the yield, latex flow, and antioxidants parameters 61
3. Study of the effect of TPD occurrence 61
4. Phenotypic variability and genetic analysis of main antioxidant parameters 62
D. Materials 63
1. Latex and serum 63
2. Chemicals 64
E. Equipment 65
F. Methods 66
1. Yield calculation 66
2. Initial latex flow (IF) and plugging index (PI) 66
3. Bursting index (BI) 67
4. Total solid content (TSC) 68
5. Sucrose content (Suc) 68
6. Inorganic phosphorus content (Pi) 68
7. Thiols content (RSH) 69
8. Reduced ascorbate (AsA) and oxidised ascorbate (DHA) quantification ... 69
9. Reduced glutathione (GSH) and oxidised glutathione (GSSG) quantification 70

10. Nicotinamide adenine dinucleotide (NAD) and reduced nicotinamide adenine dinucleotide (NADH) determination 71
11. Nicotinamide adenine dinucleotide phosphate (NADP), and reduced nicotinamide adenine dinucleotide phosphate (NADPH) 72
12. Dry Cut Length (DCL) Measurement 72
13. Heritability and Best Linear Unbiased Prediction (BLUP) calculation 72
14. Quantitative Trait Locus (QTL) mapping on antioxidants-related traits 73

G. Data Analysis 73

IV. RESULTS 75

A. Clonal Variability of Antioxidants in Latex *Hevea brasiliensis* 75
B. Effect of Tapping Frequency and Ethephon Stimulation 77
C. Effect of TPD Occurrence 83
D. Alteration in the Ratio of Glutathione in the Reduced Thiols Content 89
E. Phenotypic Variability of Eight Recommended Rubber Clones 89
F. Heritability of Some Antioxidants 91
G. QTL Mapping of Latex Antioxidants-related Traits 91

V. DISCUSSION 93

A. Analysis of Oxidised and Reduced Antioxidants Improved the Knowledge of Antioxidant Regulation in *Hevea brasiliensis* Latex 93
B. RSH Remains a Good Physiological Marker of Latex Metabolism if Supported by Reference Data 95
C. RSH Relationship with other Physiological Parameters 99
D. First Attempt on QTL Analysis on Latex Antioxidants-related Traits 102

VI. CONCLUSION AND PERSPECTIVE 103

A. Conclusion 103
B. Perspective 104
