ABSTRACT.....	vii
GLOSSARY	viii
1. INTRODUCTION	1
2. OBJECTIVE	3
3. MATERIAL AND METHOD.....	4
2.1. Location and evaluation methodology	4
2.2. System boundary and Functional Unit.....	4
2.3. Life-cycle GHG calculation	6
2.3.1. Scenario 1 (mulching).....	6
2.3.2. Scenario 2 (ash application).....	8
2.3.3. Scenario 3 (pelleting).....	9
Table 2. The cited values of GHG emissions in Scenario 3.....	10
2.4. Net GHG emissions considering reduction effects	10
2.4.1. Carbon sequestration in soil by mulching (Scenario 1)	12
2.4.2. Substitution effect on MOP in Scenario 2.....	13
2.4.3. Substitution effect on fossil fuel in Scenario 3	14
2.5. Sensitivity analysis.....	15
4. RESULT AND DISCUSSION.....	16
4.1. The GHG emissions in each scenario	16
4.2. The net GHG emissions considering the GHG reduction effect in each scenario	19
4.3. Sensitivity analysis and threshold point of net GHG emissions	22
Scenario 3.....	23
5. CONCLUSION.....	33
Acknowledgment	35
Reference	36

TABLE

Table. 1 The basic information of EFB.....	5
Table 2. The cited values of GHG emissions in Scenario 3.....	10
Table 3. The GHG emissions in each scenario (kg-CO ₂ eq/t-EFB).....	16
Table 4. Net GHG emissions to coal-fired power generation with sensitivity analysis in Scenario 3 (kg-CO ₂ eq/t-EFB).....	26
Table 5. Net GHG emissions to LNG-fired power generation with sensitivity analysis in Scenario 3 (kg-CO ₂ eq/t-EFB).....	29
