FOREWORDS

This thesis took a lot of effort to put together and it would not have ever reached completion without God and the help of numerous people. For that, I express my most sincere gratitude to all of them.

Foremost, I would like to convey my gratitude towards my supervisors, I Gede Mujiyatna, S.Kom., M.Kom. and Yunita Sari, S.Kom., M.Sc., Ph.D, and a special thanks to Dr. Dirk Lucas. Without Dr. Dirk Lucas of Helmholtz-Zentrum Dresden - Rossendorf (HZDR) and Dr. Hendrik Hessenkemper of HZDR, I would not have had the privilege to conduct the experiments and a majority of my thesis in Germany. I also thank them along with Dr. Hendrik Hessenkemper for their enthusiasm, immense knowledge, abundant advices and patience in the making of this thesis. The financial support and opportunity given by HZDR are gratefully acknowledged, and I thank the institute as a whole for giving me the chance to develop, both hard- and soft-skills, as well as gaining invaluable experiences. I am also deeply appreciative towards Computer Science Study Program at Universitas Gadjah Mada for their support during the course of the research internship.

My joy knows no boundaries in thanking Saniko Rama Danadhif, Ahmad Azka Kusuma Edy, and Gian Ilham Ramadhan for filling my days with laughter and valuable day-to-day help. In Dresden, a special thank you to Mochammad Javana Virliando, Patricia Sheryl Angelica, Reynaldo Linelson, Akbar Arif, Muhammad Hanif, Barlian Gumay, Dhafin Fauzan, Muhammad Nabil Satria Faradis, and Muhammad Norman Mikhail for their help and advice on how to not overthink about the thesis and how to finish it. In Yogyakarta, I am blessed to have had the support of my friend Adam Ibnu Fiadi, Muhammad Rauf, Muhammad Fabian Suhiddin, Bagaskara Putra, Farabi Dharma Rizqi Utama, and Computer Science Student of UGM in general. Last but not least, my mother, father, and sister. Their love and continuous support are what kept me going. I am greatly indebted.
