ABSTRACT

Background: Humans are a unique asset, because they are the only living assets, so special treatment is needed to maintain their loyalty to the company. Employee Engagement is one way to make employees have high loyalty. Several things have the potential to affect worker satisfaction with the services provided by Pertamina Cirebon Hospital to workers.

Method: The type of research that will be used in this study is Mixed Methods, with a total sample of 399 quantitative research participants and 7 participants for qualitative research.

Objectives: Knowing the relationship between the degree of HR engagement and worker satisfaction at the Pertamina Cirebon Hospital Onsite Unit, Knowing a more in-depth description of the HR engagement degree at the Pertamina Cirebon Hospital Onsite Unit with the lowest score and Knowing a more in-depth description of worker satisfaction at the Pertamina Cirebon Hospital Onsite Unit with the lowest score.

Result: There is a relationship between the degree of HR engagement and worker satisfaction at the Onsite Unit of the Pertamina Cirebon Hospital with a P-Value of 0.002. The degree of HR engagement with the lowest indicator value is management and support as well as growth. Employee satisfaction with the lowest indicator scores is co-workers and promotions. promotion policies in some places are still not appropriate, most promotions are carried out objectively, some are carried out subjectively.

Conclusion and recommendation: Increasing the involvement of the Pertamina Cirebon Hospital Onsite team in the Occupational Health and Industrial Hygiene (OHIH) program, in addition to increasing target achievement, it is hoped that it can also increase the degree of HR engagement with the hope of increasing work productivity and work quality.
