CHAPTER 1 INTRODUCTION	1
1.1 Background	1
1.2 Study Cases	6
1.3 Objectives	7
1.4 Expected benefit from the research	7
1.5 Research authenticity	7
CHAPTER 2 LITERATURE STUDY	12
2.1 Literature review	12
2.1.1 Greenhouse gas (GHG) emission	12
2.1.2 Nitrous oxide emission (N ₂ O)-nitrification	13
2.1.3 Root exudate (RE)	17
2.1.4 Metabolomics profiling	18
2.1.5 Biological nitrification inhibition (BNI)	20
2.1.6 Maize	23
2.1.7 Biochar	28
2.1.8 Factor affecting BNI-release by plant to environment	33

2.2	Theoretical basis	37
2.3	Hyphothesis	40
CHAPTER 3 MATERIAL AND METHODS.....		41
3.1	Research material and equipment.....	41
3.2	Research time and place.....	41
3.3	Research Procedures.....	41
3.3.1	Experiment I: Characterization of maize varieties	41
3.3.1.1	Experiment site description.....	41
3.3.1.2	Experimental design	42
3.3.1.3	Nitrous oxide emission from soil	43
3.3.1.4	Ammonium and nitrate concentration in soil	45
3.3.1.5	Maize physiology and yield analysis	45
3.3.1.6	Maize characterization method	46
3.3.1.7	Data analysis.....	46
3.3.2	Experiment II (Greenhouse experiment-1): Identification of several maize cultivars with capacity of biological nitrification inhibition (BNI).....	47
3.3.2.1	Experiment design.....	47
3.3.2.2	Gas sampling and measurement	48
3.3.2.3	Soil sampling and measurement of $\text{NH}_4^+\text{-N}$ and $\text{NO}_3^-\text{-N}$	48
3.3.2.4	Plant sampling and measurement	48
3.3.2.5	Nitrification rate and nitrification inhibition of soil.....	49
3.3.2.6	Data analysis.....	49
3.3.3	Experiment III: Biological Nitrification Inhibition by Maize Root Exudate .50	
3.3.3.1	Identification of BNI capacity by maize rot exudate.....	50
3.3.3.2	Collection of root exudate	50
3.3.3.3	Determination of BNI capacity	51
3.3.3.4	Data analysis.....	53

3.3.4 Experiment IV (Greenhouse experiment-2): Understanding the mechanism of biochar in suppressing N ₂ O emission.....	53
3.3.4.1 Biochar production.....	53
3.3.4.2 Experimental Design	53
3.3.4.3 Gas sampling	54
3.3.4.4 Soil sampling and preparation	54
3.3.4.5 Plant sampling and preparation	55
3.3.4.6 Abundance of nitrifying bacteria.....	55
3.3.4.7 Data analysis.....	55
CHAPTER 4 RESULT AND DISCUSSION	56
4.1 Identification of Maize Varieties: characterization of grain yield and nitrous emission in responses to different nitrogen application rates.....	56
4.1.1 Grain yield and cumulative nitrous oxide under different nitrogen-treatments.....	56
4.1.2 Categorization of the maize varieties based on the grain yield and cumulative nitrous oxide (N ₂ O).....	60
4.1.3 Nitrogen response-associated traits of efficient-efficient and nonefficient-nonefficient varieties groups	66
4.2 Identification of several maize cultivars with potential nitrification inhibition to nitrogen loss from soil.....	75
4.2.1 Nitrification rate of the soil.....	76
4.2.2 Nitrification inhibition capacity	78
4.2.3 N dynamics: ammonium, nitrate, and nitrous oxide.....	82
4.2.1 Relationship between nitrification and nitrogen dynamic and nitrogen uptake by plant	86
4.3 Biological nitrification inhibition (BNI) by maize root exudate	90
4.3.1 Diversity of amino acid in root exudate under different maize varieties ...	92
4.3.2 Glycolysis	108
4.3.3 TCA cycle	109

4.3.4 Purine and pyrimidine	113
4.3.5 Shikimate.....	118
4.3.6 Amino sugar and nucleotide sugar.....	121
4.3.7 Phytohormone and vitamin	126
4.3.8 Other metabolites	129
4.3.9 Nitrification inhibition capacity in soil by root exudate of maize	131
4.4 Mechanism of biochar in suppressing nitrification.....	136
4.4.1 Characterization of biochar	136
4.4.2 Soil physicochemical properties after planting	139
4.4.3 Daily net nitrous oxide flux emission	145
4.4.4 Mineral N concentration	148
4.4.5 Biomass, root system and nitrogen uptake by plant.....	151
CHAPTER 5 CONCLUSION.....	157
REFERENCES.....	158
ATTACHMENTS.....	204
