

## Implikasi

Penelitian ini menambah kajian tentang ciri-ciri item Tes Penilaian Situasi yang bagus secara properti psikometris. Sebelumnya sudah terdapat beberapa penelitian untuk mengetahui seperti apa TPS yang bagus, namun belum menggunakan metode ini. Metode penelitian seperti ini dapat dilakukan lagi dengan sampel yang berbeda dan klasifikasi yang baru.

## Limitasi

Klasifikasi pada setiap atribut TPS tidak memiliki jumlah yang berimbang, bahkan hingga sangat timpang. Ketimpangan yang disebabkan pada klasifikasi tersebut sebenarnya wajar terjadi dengan metode yang dilakukan, namun perbedaan jumlah membuat perhitungan tidak dapat dilakukan dengan seimbang dan ketika dicoba melakukan analisis statistik pun, analisis yang digunakan adalah uji non parametrik. Bahkan tidak hanya ketimpangan jumlah klasifikasi, jumlah item yang dites juga tergolong sedikit, yakni 40. Jumlah tersebut mempersempit penelitian sehingga ketika terjadi ketimpangan, dampaknya akan sangat terasa.

## Kesimpulan

Penelitian ini menunjukkan adanya perbedaan kecil antara klasifikasi item berdasarkan properti psikometrisnya. Perbedaan yang paling besar ditemui pada

klasifikasi berdasarkan bentuk respons, dengan perbedaan lain cenderung kecil karena kualitas dari item TPS yang tergolong tinggi. Dari kesimpulan tersebut, penulis item TPS selanjutnya dapat membuat item dengan memperhatikan CIIAs antara lain Tipe situasi *decontextualized*, model respons nominal, pelibatan dilema kecil, kompleksitas tinggi, bentuk respon berupa aksi/perilaku, dan peranan non profesional apabila ingin mendapatkan bobot faktor atau daya diskriminan yang tinggi. Adapun berdasarkan tingkat kesulitan, pengembang dapat membuat item dengan tipe situasi *contextualized*, Model Respons Nominal, Pelibatan dilema tinggi, Kompleksitas rendah, Bentuk respon pendapat/sikap, dan peranan profesional untuk mendapatkan item dengan tingkat kesulitan tinggi.

### Saran

Penelitian selanjutnya disarankan untuk menentukan CIIAs terlebih dahulu lalu membuat item berdasarkan klasifikasi. Dengan demikian, setiap CIIAs dari Tes Penilaian Situasi nantinya memiliki jumlah yang sama dan diharapkan dapat lebih valid menunjukkan perbedaan. CIIAs kemudian dapat menjadi lebih bebas dari pengaruh konstruk atau konten dari TPS itu sendiri. Selain itu, metode pemetaan ini merupakan metode yang dapat dilakukan lebih banyak karena potensinya. Untuk memaksimalkannya, pada penelitian selanjutnya dapat dibuat CIIAs lain yang dapat lebih menggambarkan macam-macam item dari TPS.
