PREFACE	vi
TABLE OF CONTENT	vii
LIST OF TABLES	xii
LIST OF FIGURES.....	xvi
ABSTRACT.....	xxiii
INTISARI.....	xxiv
CHAPTER 1 INTRODUCTION	1
1.1 Background	1
1.2 Problem Statement	2
1.3 Objectives	2
1.4 Limitation.....	2
1.5 Benefit.....	3
CHAPTER 2 LITERATURE REVIEW	4
2.1 The Evolution of Seismic Evaluation Guideline	4
2.2 Seismic Evaluation Method for Building Structure.....	4
2.3 Irregular Building.....	6
2.4 Deformation Controlled Action (DCA) and Force Controlled Action (FCA).....	7
2.5 Modeling Parameter in SAP2000	8
2.5.1 Insertion Point	8
2.5.2 Mesh.....	9
2.6 Research Originality	10
CHAPTER 3 THEORETICAL BACKGROUND.....	12
3.1 Material Property	12
3.2 Stiffness Reduction Factor	12
3.3 Effective Seismic Weight	13
3.4 Risk Category.....	13
3.5 Performance Objective.....	14
3.5.1 Basic Performance Objective for Existing Buildings (BPOE)	14
3.5.2 Enhanced Performance Objective	15
3.5.3 Limited Performance Objective	16

3.5.4 Basic Performance Objective Equivalent to New Building Standards (BPON)	16
3.6 Target Building Performance Level.....	17
3.6.1 Structural Performance Level	17
3.6.2 Nonstructural Performance Level	18
3.7 Seismic Hazard Level	19
3.7.1 General Procedure	20
3.7.2 Site-Specific Procedure	21
3.7.3 Ground Motion Acceleration Histories Procedure.....	21
3.8 Load and Load Combination	23
3.8.1 Dead Load	23
3.8.2 Live Load	24
3.8.3 Seismic Load.....	24
3.8.4 Load Combination.....	31
3.8.5 Additional Parameter for Load Calculation	33
3.9 Tier 3 Evaluation Requirement	41
3.9.1 Mathematical Modeling	41
3.9.2 Primary Element and Secondary Element.....	42
3.9.3 Component Capacity	42
3.9.4 Damping.....	42
3.9.5 Building Irregularity.....	43
3.9.6 Multidirectional Seismic Effect	44
3.9.7 P-Delta (P- Δ) Effect.....	46
3.9.8 Linear Procedure	46
3.9.9 Acceptance Criteria.....	49
CHAPTER 4 RESEARCH METHOD.....	51
4.1 Research Procedure.....	51
4.2 Research Tool	53
4.3 Research Data	53
4.3.1 General Data.....	53
4.3.2 Architectural Data	54
4.3.3 Structural Data	54
4.4 Standard and Regulation	57
4.5 Preliminary Consideration	57

4.5.1	Material Property	57
4.5.2	Stiffness Reduction Factor	58
4.5.3	Effective Seismic Weight.....	58
4.5.4	Risk Category.....	58
4.5.5	Performance Objective.....	59
4.5.6	Target Building Performance Level.....	59
4.5.7	Seismic Hazard Level	59
4.5.8	Multidirectional Seismic Effect	59
4.5.9	P-Delta (P- Δ) Effect.....	60
4.6	Analysis Method	60
4.7	Structural Modeling Step	60
4.7.1	Defining The Coordinate or Grid System	60
4.7.2	Defining The Material of The Component.....	61
4.7.3	Defining The Cross-Sectional Properties of The Components.....	65
4.7.4	Structural Modeling	84
4.7.5	Assigning The Joint Restraint	85
4.7.6	Assigning The Insertion Point of Beams and Slabs.....	86
4.7.7	Assigning The Area Mesh.....	87
4.7.8	Assigning The Diaphragm	88
4.7.9	Defining The Rigid Zone Factor	89
4.8	Structural Loading Calculation	90
4.8.1	Dead Load	90
4.8.2	Live Load	91
4.8.3	Seismic Load.....	92
4.8.4	Additional Parameters for Load Calculation.....	118
4.8.5	Load Combination.....	119
4.9	Structural Loading Definition in SAP2000.....	140
4.9.1	Defining The Load Pattern.....	140
4.9.2	Defining The Load Case	140
4.9.3	Defining The Load Combination	144
4.9.4	Defining The Mass Source.....	148
4.9.5	Assigning The Loads on Each Element	149
CHAPTER 5 RESULT AND DISCUSSION		150
5.1	Modal Analysis Results	150

5.1.1	Modal Shape	150
5.1.2	Combined Modal Mass Participation.....	151
5.2	Building Irregularity Check	151
5.2.1	In-Plane Discontinuity Irregularity	151
5.2.2	Out-of-Plane Discontinuity Irregularity	151
5.2.3	Weak Story Irregularity.....	152
5.2.4	Torsional Strength Irregularity.....	152
5.2.5	Summary of Building Irregularity.....	153
5.3	Component Capacity.....	154
5.4	Linear Procedure	154
5.4.1	Linear Static Procedure	155
5.4.2	Linear Dynamic Procedure	155
5.5	Acceptance Criteria.....	155
5.5.1	Modification Factor for Each Component	155
5.5.2	Evaluation Result	156
5.5.3	Components with Acceptance Criteria Ratio Greater Than 1.....	161
5.5.4	Comparison between Response Spectrum Analysis Method and Linear Time History Analysis Method.....	167
5.5.5	Summary of The Performance Level of Each Component.....	167
5.6	Demand-Capacity Ratio Check.....	168
CHAPTER 6 CONCLUSION AND RECOMMENDATION.....		170
6.1	Conclusion	170
6.2	Recommendation	171
REFERENCES.....		172
APPENDIX A Dead Load.....		175
APPENDIX B Live Load.....		181
APPENDIX C Architectural Data.....		182
APPENDIX D Structural Data.....		204
APPENDIX E Stiffness Reduction Factor for Flexural Rigidity of Column Components .		221
APPENDIX F Beam Capacity		224
APPENDIX G Column Capacity		232
APPENDIX H Modification Factor for Beam Components in BSE-1N Seismic Hazard Level		240

APPENDIX I Modification Factor for Column Components in BSE-1N Seismic Hazard	
Level	278
APPENDIX J Modification Factor for Beam Components in BSE-2N Seismic Hazard	
Level	291
APPENDIX K Modification Factor for Column Components in BSE-2N Seismic	
Hazard Level.....	329
APPENDIX L Demand-Capacity Ratio of Beam Components in BSE-1N Seismic	
Hazard Level.....	342
APPENDIX M Demand-Capacity Ratio of Column Components in BSE-1N Seismic	
Hazard Level.....	363
APPENDIX N Demand-Capacity Ratio of Beam Components in BSE-2N Seismic	
Hazard Level.....	369
APPENDIX O Demand-Capacity Ratio of Column Components in BSE-2N Seismic	
Hazard Level.....	390
APPENDIX P Evaluation of Beam Components in BSE-1N Seismic Hazard Level.....	396
APPENDIX Q Evaluation of Column Components in BSE-1N Seismic Hazard Level	411
APPENDIX R Evaluation of Beam Components in BSE-2N Seismic Hazard Level	416
APPENDIX S Evaluation of Column Components in BSE-2N Seismic Hazard Level	431
