Penelitian terapi penyakit ular di Klinik Hewan Calico dapat dipakai sebagai acuan atau data base pasien, serta untuk dasar dalam edukasi klien dan antisipasi penanganan pasien. Tujuan penelitian ini adalah mengetahui prevalensi terapi penyakit ular, serta diagnosis dan status kesehatan hewan ular di Klinik Hewan Calico periode Januari – Desember 2023. Penelitian dilakukan dengan metode retrospektif menggunakan sumber data medical record pasien ular di Klinik Hewan Calico periode Januari – Desember 2023. Data pasien dikelompokkan berdasarkan status kesehatan dan gangguan kesehatan per sistem organ. Data ditabulasikan menggunakan program *Microsoft Excel* kemudian disajikan dalam bentuk tabel dan grafik. Hasil penelitian menunjukkan jumlah pasien ular periode Januari – Desember 2023 adalah 11 pasien ular, dengan rincian 1 (9.09 %) ular sehat dan 10 (90.909 %) ular sakit. Pasien ular sakit sebanyak 10 mengalami penyakit kardiovaskular sebanyak 1 pasien, gangguan lain seperti *Vulnus Morsum* dan birahi (pasien sehat) adalah sebanyak 2 pasien, penyakit sistem integumen 5 pasien, dan penyakit digestive sebanyak 2 pasien. Berdasarkan hasil penelitian, dapat disimpulkan bahwa jumlah pasien ular di Klinik Hewan Calico selama periode Januari- Desember 2023 adalah 11 pasien terdiri dari 1 (9.09 %) pasien ular sehat dan 10 (90.909 %) pasien ular sakit. Pasien ular sakit terdiri dari gangguan lain-lain sebanyak 2 (18.18%), gangguan sistema digesti 3 (27.27%), gangguan integumen 5 (45.45%) dan gangguan kardiovaskuler 1 (9.09%). Perlu dilakukan penelitian lebih lanjut dengan variasi pasien ular dan parameter yang lebih banyak untuk mendapatkan hasil yang lebih baik. Manajemen pemeliharaan berdampak signifikan terhadap terjadinya penyakit pada reptil.

Snake disease therapy research at the Calico Veterinary Clinic can be used as a reference or patient database, as well as as a basis for client education and patient care anticipation. The aim of this study was to determine the prevalence of snake disease therapy, health status and diagnosis of snake patients at the Calico Veterinary Clinic for the period January - December 2023. The research was conducted using a retrospective method using medical record data sources for cat patients at the Calico Veterinary Clinic for the period January - December 2023. Patient data was grouped based on health status and health problems. per organ system. Data was tabulated using the Microsoft Excel program and then presented in the form of tables and graphs. The research results showed that the number of snake patients for the period January – December 2023 was 11 snake patients, with details of 1 (9.09%) healthy snake and 10 (90.909%) sick snakes. 10 patients with sick snakes experienced cardiovascular disease in 1 patient, other disorders such as *Vulnus Morsum* and *Estrus* (healthy patient) in 2 patients, integumentary system disease in 5 patients, and digestive disease in 2 patients. Based on the study, it can be concluded that the number of snake patients at the Calico Veterinary Clinic during the January-December 2023 period was 11 patients consisting of 1 (9.09%) healthy snake patient and 10 (90.909%) sick snake patients. Sick snake patients consisted of 2 (18.18%) other disorders, 3 (27.27%) digestive system disorders, 5 (45.45%) integumentary disorders and 1 (9.09%) cardiovascular disorder. It needs needs further research with more variety of snake patients and parameter for better results. Maintenance management significantly impacts disease occurrence in reptiles.
