Kelurahan Selopuro mendapatkan sertifikat pengelolaan hutan rakyat lestari yang mengikuti standar LEI oleh lembaga sertifikasi MAL (Mutu Agung Lestari) pada tahun 2004. Sejak saat itu, belum ada suatu studi khusus atau evaluasi mengenai implementasinya di lapangan. Tujuan penelitian ini adalah untuk menganalisis kegiatan pengelolaan hutan rakyat yang ada di Kelurahan Selopuro pasca sertifikasi serta untuk merumuskan solusi tindakan pengelolaan hutan rakyat tersebut pasca sertifikasi.

Penelitian ini menggunakan metode kualitatif melalui survei. Sampel diambil secara random, sehingga semua orang berkesempatan yang sama untuk menjadi responden. Data yang dikumpulkan berupa data primer dan sekunder melalui pengisian kuesioner dan wawancara. Data yang didapat kemudian dianalisis dengan menggunakan metode perbandingan dengan standar kriteria dan indikator LEI.

Hasil yang diperoleh menunjukkan bahwa pengelolaan hutan rakyat di Selopuro sebelum dan sesudah adanya sertifikasi PHBML tidak jauh berbeda. Masih ada masalah-masalah di dalam pengelolaan hutan tersebut pasca sertifikasi. Dapat dikatakan bahwa sertifikasi tidak membawa pengaruh yang signifikan terhadap pengelolaan hutan rakyat di Selopuro.

Kata kunci : Hutan Rakyat, PHBML, Sertifikasi.
