<b>APPROVAL PAGE</b> .....	iii
<b>STATEMENT OF ORIGINALITY</b> .....	iv
<b>FOREWORD</b> .....	v
<b>TABLE OF CONTENTS</b> .....	vii
<b>LIST OF TABLES</b> .....	ix
<b>LIST OF FIGURES</b> .....	x
<b>LIST OF APPENDICES</b> .....	xi
<b>INTISARI</b> .....	xii
<b>ABSTRACT</b> .....	xiii
<b>INTRODUCTION</b> .....	1
<b>1.1. Background</b> .....	1
<b>1.2. Objectives</b> .....	3
<b>1.3. Benefits</b> .....	3
<b>LITERATURE STUDY</b> .....	4
<b>2.1. Tree Health Assessment in the Campus Area of UGM</b> .....	4
<b>2.2. Wood-Decaying Fungi</b> .....	5
<b>2.3. <i>Manilkara kauki</i> (L.) Dubard</b> .....	6
<b>2.4. An Overview of the Vegetation in the UGM Campus Area</b> .....	7
<b>METHODOLOGY</b> .....	9
<b>3.1. Research Time and Location</b> .....	9
<b>3.2. Materials and Equipment</b> .....	9
<b>3.3. Data Collection</b> .....	10
<b>A. Assessment of the general health status of <i>M. kauki</i> trees in the campus area of UGM</b> .....	10
<b>B. Morphological characteristics observation of wood-decaying fungi infecting <i>M. kauki</i> trees in the campus area of UGM</b> .....	11
<b>C. Health assessment of <i>M. kauki</i> infected with wood-decaying fungi</b>	12
<b>D. Correlating the association of wood-decaying fungi and disease severity</b> .....	14
<b>3.4. Data Analysis</b> .....	14

<b>RESULT AND DISCUSSION</b> .....	15
<b>4.1. The general health status of <i>Manilkara kauki</i> in UGM</b> .....	15
<b>4.2. The morphological characteristics of wood-decaying fungi infecting <i>M. kauki</i> trees in the campus area of UGM</b> .....	19
<b>4.3. The health condition of <i>M. kauki</i> trees associated with wood-decaying fungi</b> .....	23
<b>4.4. Correlation between wood-decaying fungi association and disease severity on <i>M. kauki</i> at UGM</b> .....	27
<b>CONCLUSION AND SUGGESTION</b> .....	30
<b>5.1. Conclusions</b> .....	30
<b>5.2. Suggestions</b> .....	31
<b>BIBLIOGRAPHY</b> .....	32
<b>APPENDICES</b> .....	42

## LIST OF TABLES

	Page
<b>Table 1.</b> Tree health evaluation checklist.....	10
<b>Table 2.</b> Categorisation of health status based on the health assessment points... 11	11
<b>Table 3.</b> The scale of individual severity derived from the canopy damage and the types of basidiocarp from each tree. ....	12
<b>Table 4.</b> Damage status of wood-decaying fungi infection for each <i>M. kauki</i> tree in the campus area of UGM. ....	13
<b>Table 5.</b> The coefficient of determination to determine the correlation between two variables on <i>M. kauki</i> trees at UGM. ....	14
<b>Table 6.</b> Identification of wood-decaying fungi genera infecting <i>M. kauki</i> trees in UGM. ....	20
<b>Table 7.</b> Table of correlation between the number of wood-decaying fungi basidiocarp and individual disease severity. ....	28

## LIST OF FIGURES

	Page
<b>Figure 1.</b> Characteristics of wood-decaying fungi residues, a. white-rot fungi (personal documentation) and b. brown-rot fungi (Deacon, n.d.).	6
<b>Figure 2.</b> Manilkara kauki tree in the campus area of Universitas Gadjah Mada, at the Faculty of Agriculture.	7
<b>Figure 3.</b> Map of research location in the campus area of Universitas Gadjah Mada, with specific research location of Manilkara kauki trees shown by the yellow dots.	9
<b>Figure 4.</b> Number of M. kauki tree health status distribution at the campus of UGM.	15
<b>Figure 5.</b> Number of the distribution of M. kauki diameter in the tree health status is divided into four classes, A (DBH $\leq$ 16 cm), B (16 cm $\leq$ DBH < 31 cm), C (31 cm $\leq$ DBH < 45 cm), and D (DBH $\geq$ 45 cm).	16
<b>Figure 6.</b> Number of tree damage types identified on M. kauki trees in the campus area of UGM based on the Tree Health Assessment of MacDonagh (2020), with TW (trunk wound), M (mushroom), TF (trunk flare), SR (surface roots), SD (soil drainage rate), DC (density of canopy leaves), LC (leaf colour and appearance), and TB (trunk base branches) as the types of damage.	17
<b>Figure 7.</b> a. Manilkara kauki near the Central Building of UGM, b. M. kauki near the Central Library of UGM, c. M. kauki near the Grha Sabha Pramana building, and d. M. kauki on the side of Nusantara Street near Pancasila Field.	18
<b>Figure 8.</b> a. Normal canopy perimeter shape, b. and c. unbalanced canopy shape resulting in leaning trees.	18
<b>Figure 9.</b> Wood-decaying fungi are present on M. kauki trees in the campus area of UGM, a. below the DBH and b. above the DBH.	19
<b>Figure 10.</b> Morphological characteristics of Ganoderma spp.: a–e. Variation of Ganoderma spp. basidiocarps, f. pore surface characteristics, and g. spore of Ganoderma spp.	21
<b>Figure 11.</b> Morphological characteristics of Phellinus spp.: a–e. Variation of Phellinus spp. basidiocarps, f. pores characteristic, and g. spore of Phellinus spp.	22
<b>Figure 12.</b> Number of trees by the genera of wood-decaying fungi, G: Ganoderma, P: Phellinus, and GP: both Ganoderma and Phellinus.	23
<b>Figure 13.</b> Comparison of basidiocarp number across each genus, G: Ganoderma, P: Phellinus, and GP: both Ganoderma and Phellinus.	24
<b>Figure 14.</b> Number of M. kauki trees' disease category, nil (0%), low (0% < DS $\leq$ 25%), moderate (25% < DS $\leq$ 50%), severe (50% < DS $\leq$ 75%), and very severe (75% < DS $\leq$ 100%). Percentages were obtained from the number of trees in disease severity status divided by 120 (total trees observed). N: nil, L: low, M: moderate, S: severe, and VS: very severe.	26
<b>Figure 15.</b> Map of the distribution of M. kauki trees in the campus area of UGM. Green dots indicate the healthy trees, while the red dots indicate the wood-decaying fungi-infected trees.	27

## LIST OF APPENDICES

<b>Appendix 1.</b> The map of the Universitas Gadjah Mada campus area was updated in 2023. (Source: Faculty of Geography, Department of Science). .....	42
<b>Appendix 2.</b> a. Mycelium on the outer bark of <i>M. kauki</i> and b. mycelium starts to form basidiocarp. ....	42
<b>Appendix 3.</b> Trunk wounds observed on <i>M. kauki</i> trees in the urban forest of UGM.....	42
