Cover Page	i
Approval Page	iii
STATEMENT	iii
PREFACE	v
TABLE OF CONTENTS	vii
LIST OF TABLES	ix
LIST OF FIGURES	x
LIST OF APPENDICES	xii
LIST OF ABBREVIATIONS	xiii
ABSTRACT	xiv
CHAPTER I INTRODUCTION	1
1.1 Research Background	1
1.2 Research Problems	5
1.3 Research Objectives	5
1.4 Authentication.....	7
1.5 Research Scope	11
1.6 Research Outcomes.....	12
CHAPTER II LITERATURE REVIEWS	14
2.1 Foodborne pathogens (FBPs).....	14
2.2 <i>Staphylococcus aureus</i> (SA).....	15
2.3 <i>Salmonella enterica</i> serovar Typhimurium (ST).....	19
2.4 <i>Bacillus</i> sp.....	22
2.5 Secondary metabolites (SMs) containing bioactive compounds and the one strain many compounds (OSMAC) strategy	25
2.6 Antibacterial assays	29
2.7 Fourier Transform Infrared Spectroscopy (FTIR)	32
2.8 Liquid Chromatography-High Resolution Mass Spectrometry (LC- HRMS).....	33
2.9 Multivariate analysis	37
2.10 Scanning Electron Microscope (SEM)	39

2.11	Genomic study: genome mining	40
2.12	<i>In silico</i> molecular docking.....	44
2.13	Research Framework	47
CHAPTER III MATERIALS AND METHODS		50
3.1	Research Time and Place	50
3.2	Design of Experiment	50
3.3	Research Variables.....	51
3.4	Operational Definition	51
3.5	Research Workflow	53
3.6	Instrumentation and Data Collection	55
3.6.1	Research instrumentation	55
3.6.2	Methods	57
CHAPTER IV RESULTS AND DISCUSSION		67
4.1	Screening of Isolates-derived Crude Extracts	68
4.2	Characterization of Functional Groups and Metabolites in All Extracts	74
4.3	Time-kill Assay and SEM	108
4.4	Growth curves of <i>Bacillus</i> sp. BP1 in different media.....	112
4.5	Whole genome sequence of <i>Bacillus</i> sp. BP1 and the genome mining.....	114
4.6	<i>In silico</i> molecular docking	130
4.6.1	Selected compounds against SA protein targets	132
4.6.2	Selected compounds against ST protein targets	135
CHAPTER V CONCLUSIONS AND RECOMMENDATION REMARKS		141
5.1	Conclusions.....	141
5.2	Recommendations.....	142
BIBLIOGRAPHY		143
APPENDICES		169

LIST OF TABLES

Table 1. Research articles that also discussing the exploration of bacterial secondary metabolites as anti-foodborne pathogens <i>S. aureus</i> and <i>S. Typhimurium</i>	7
Table 2. The extraction results obtained from <i>Bacillus</i> sp. BP1 isolates in different fermentation medium (<i>Bacillus</i> sp. BP1-OSMAC).....	71
Table 3. Zone of Inhibition and MIC50 of <i>Bacillus</i> sp. BP1-OSMAC.....	72
Table 4. The wavenumbers of each extract and their corresponding functional groups	75
Table 5. Lists 19 compounds shared among the samples and their characteristics. (a) for the supernatant extracts, (b) for the pellet extracts	92
Table 6. Predicted biological activities of two screened compounds.....	106
Table 7. <i>Bacillus</i> sp. BP1 genome sequence characteristics	115
Table 8. A List of biosynthetic gene clusters (BGCs) and their associated compounds according to the AntiSMASH.....	119
Table 9. Binding affinity of the selected compounds and reference compound against <i>S. aureus</i> and <i>S. Typhimurium</i> protein targets.....	130

LIST OF FIGURES

Figure 1. The potential of biofilm formation on various contact surfaces throughout the entire food supply chains	16
Figure 2. Several approved antibacterial agents-targeting sites (A) and (B) antibiotics resistance mechanisms	30
Figure 3. Genome mining approaches.....	42
Figure 4. The conceptual framework of the present study	48
Figure 5. Research workflow.	54
Figure 6. <i>Bacillus</i> sp. BP1 under the scanning electron microscope (a) and its colony morphology in petri dish (b).	68
Figure 7. FTIR spectra of twelve extracts plotted as wavenumber (cm-1) versus transmittance (%).	74
Figure 8. Scree plot, score plot, and dendrogram of the FTIR data of twelve <i>Bacillus</i> sp. BP1 extracts	87
Figure 9. Variables importance of projection (VIPs) of the FTIR data of twelve extracts.....	90
Figure 10. Score plot and dendrogram of the untargeted LC-HRMS of twelve <i>Bacillus</i> sp. BP1 extracts	96
Figure 11. The heatmap of 19 compounds detected in each extract using untargeted LC-HRMS	98
Figure 12. Pathway enrichment analysis of compounds contained in P-TSB (a.) and S-TSB-chi (b.)	100
Figure 13. Variables importance of projection (VIPs) of the untargeted LC-HRMS data of twelve extracts using PLS-DA regarding the pellet and supernatant-derived extracts discriminat	101
Figure 14. Total Ion Chromatograms (TICs) and violin plots to confirm the presence of two selected compounds.....	102
Figure 15. TICs of two best extracts, P-TSB and S-TSB-chi, along with the TICs of the pellet and supernatant for each extract	105
Figure 16. Two compounds with higher VIP scores than others	106
Figure 17. Time-kill curve of P-TSB and S-TSB-chi extracts.....	109

Figure 18. Scanning electron microscope (SEM) of both FBPs treated by P-TSB 253.50 ppm (1), S-TSB-chi 740.28 ppm (2), and ampicillin 100 ppm (3) against negative control (4)	112
Figure 19. Growth curve of <i>Bacillus</i> sp. BP1 cultivated in TSB and TSB-chi media.	113
Figure 20. The genome visualization of <i>Bacillus</i> sp. BP1	115
Figure 21. The distribution of subsystem categories and the count of subsystem features in the <i>Bacillus</i> sp. BP1 genome.	117
Figure 22. Known cluster BLAST result between the query and surfactin clusters.	129
Figure 23. The ligand-protein interaction between the selected compounds and proteins of <i>Staphylococcus aureus</i> (<i>S. aureus</i>) ATCC 25923.....	135
Figure 24. The ligand-protein interaction between the selected compounds and proteins of <i>Salmonella enterica</i> serovar Typhimurium (<i>S. Typhimurium</i>) ATCC 14028	138

LIST OF APPENDICES

APPENDICES	169
Appendix 1: Two-way ANOVA of time-kill assay followed by the Tukey HSD test.....	169
Appendix 2: Supplementary Data of <i>In silico</i> Molecular Docking Conformations	169
Appendix 3: Manuscript Text.....	183

LIST OF ABBREVIATIONS

<i>Bacillus</i> sp. BP1	<i>Bacillus</i> BP1 isolated from <i>Heterotrigona itama</i> 's bee pollen
OSMAC	One Strain Many Compound
SMs	Secondary Metabolites
FBP	Foodborne Pathogen
<i>S. aureus</i>	<i>Staphylococcus aureus</i>
<i>S. Typhimurium</i>	<i>Salmonella enterica</i> serovar Typhimurium
MIC50	Minimum Inhibitory Concentration (MIC) at 50% Population Inhibition
FTIR	Fourier-Transformed Infrared Spectroscopy-Attenuated Total Reflectance
Untargeted LC-HRMS	Untargeted Liquid Chromatography tandem with High Resolution Mass Spectrometry
SEM	Scanning Electron Microscope
PCA	Principal Component Analysis
PLS-DA	Partial Least Squares-Discriminant Analysis
WGS	Whole Genome Sequencing
BGC	Biosynthetic Gene Cluster
RiPP	Ribosomally synthesized and post-translationally modified peptides
NRPS	Non-Ribosomal Peptide Synthase
PKS	Polyketide Synthase
T3PKS	Type 3 of Polyketide Synthase
trans-AT PKS	Trans Acyltransferase Polyketide Synthase
