

## TABLE OF CONTENTS

HALAMAN PERSETUJUAN .....	iii
HALAMAN PENGESAHAN .....	iv
LEMBAR PERNYATAAN .....	v
HALAMAN PERSEMBAHAN .....	vi
PREFACE .....	vii
TABLE OF CONTENTS .....	viii
LIST OF TABLES .....	x
LIST OF FIGURES .....	xi
ABSTRACT .....	xiii
<i>INTISARI</i> .....	xiv
CHAPTER 1 INTRODUCTION .....	15
1.1 Background .....	15
1.2 Problem Statement .....	19
1.3 Research Objectives .....	20
1.4 Limitations .....	20
1.5 Benefit .....	21
1.6 Authenticity .....	21
CHAPTER 2 LITERATURE REVIEW .....	22
2.1 Early-age Concrete Cracking Involving Thermal and Shrinkage .....	22
2.2 Strain Evaluation by FE Modeling .....	24
2.3 Influence of Reinforcement Configurations .....	26
CHAPTER 3 THEORETICAL BACKGROUND .....	28
3.1 High-Performance Reinforced Concrete .....	28
3.2 Early-age Concrete Parameters .....	29
3.2.1 Elastic Modulus .....	29
3.2.2 Thermal expansion-induced stress .....	30
3.2.3 Autogenous shrinkage .....	31
3.2.4 Adiabatic temperature rise .....	33
3.2.5 Degree of restraint .....	35
3.3 Temperature and shrinkage reinforcement .....	37
3.4 Logarithmic strain and limit gradient .....	38

CHAPTER 4 RESEARCH METHOD.....	40
4.1 Research Procedure.....	40
4.2 Research Data .....	42
4.3 Research Instruments .....	43
4.4 Research Parameter.....	44
4.5 Abaqus Modelling.....	46
4.5.1 Parts and Assembly .....	46
4.5.2 Fortran Subroutines.....	51
4.6 Analysis Method .....	52
CHAPTER 5 RESULTS AND DISCUSSIONS .....	53
5.1 Advisability of unmodified design.....	53
5.1.1 Verification by on-site crack data .....	53
5.1.2 Concrete placing temperature effectiveness.....	56
5.1.3 Intact design behavior .....	60
5.2 Significance of modified reinforcement .....	62
5.2.1 Strain gradient shifts. ....	62
5.2.2 Reinforcement configuration .....	67
CHAPTER 6 CONCLUSION AND RECOMMENDATION.....	69
6.1 Conclusion .....	69
6.2 Recommendation .....	70
BIBLIOGRAPHY .....	71
APPENDIX.....	76

## LIST OF TABLES

Table 1.1 Research comparison .....	21
Table 3.1 Summary of time-dependent elastic modulus (author's calculations) .....	30
Table 3.2 Summary of time-dependent autogenous shrinkage (author's calculation) .....	32
Table 3.3 Time-dependent adiabatic temperature rise (for 1 <sup>st</sup> model division) .....	34
Table 3.4 Time-dependent adiabatic temperature rise (for 2 <sup>nd</sup> model division T=100°F) .....	34
Table 3.5 Time-dependent restraint releases (author's interpretation) .....	37
Table 3.6 Specifications for temperature and shrinkage reinforcement .....	37
Table 4.1 Summary of 1 <sup>st</sup> division models (concrete placing temperature) .....	40
Table 4.2 Summary of 2 <sup>nd</sup> division models (time-dependent early age properties) .....	41
Table 4.3 Model variables (2 <sup>nd</sup> model division) .....	45
Table 4.4 Part modules used in each model .....	47
Table 4.5 Sectional dimensions for each part module .....	47
Table 4.6 Material definitions used in each part .....	48
Table 4.7 Mesh definition used in each part. ....	48
Table 4.8 Mesh sizes examination. ....	49
Table 4.9 Boundary conditions .....	50
Table 5.1 Step-by-step strain gradient flows (Model B) .....	55
Table 5.2 Step-by-step strain gradient flows (1 <sup>st</sup> model division) .....	57
Table 5.3 Model A and Model B strain gradient comparison .....	61
Table 5.4 Model C step-by-step strain gradient flows .....	65
Table 5.5 Model C sectional strain gradient comparison .....	67

## LIST OF FIGURES

Figure 1.1 Crack propagation on project site (source: PT Adhi Karya documentation).....	15
Figure 1.2 Cracking penetrations (source: author's documentation on site).....	16
Figure 1.3 Schematic illustration of mass concrete cracking: (A) tensile stress caused by adiabatic temperature rise, (B) mass concrete cracking mechanism (Saeed et al., 2023).....	17
Figure 1.4 Unmodified sectional design of Pier P87 (source: project's construction drawing) .....	18
Figure 2.1 Cracks distribution pattern in the mid-span (Chang et al., 2019).....	22
Figure 2.2 Concrete cracking on box culvert (Liu et al., 2018) .....	23
Figure 2.3 Temperature rise concerning shrinkage strain (Liu et al., 2018; Zhu et al., 2020). 23	
Figure 2.4 Strain gradient evaluation (Liu et al., 2018) .....	24
Figure 2.5 Strain gradient matching with actual crack pattern (Gribniak et al., 2018).....	25
Figure 2.6 Concrete cracking evaluated by damage factor (Chang et al., 2019) .....	25
Figure 2.7 Influence of reinforcement configurations towards strain gradient (Gribniak et al., 2018).....	26
Figure 2.8 Influence of reinforcement ratio and configurations towards tensile stress (Huang et al., 2017).....	27
Figure 3.1 Effective confined area (Hernández-Montes et al., 2004) .....	28
Figure 3.2 Early age elastic modulus development (author's interpretation) .....	30
Figure 3.3 Early age CTE development (author's interpretation).....	31
Figure 3.4 Single-axis autogenous shrinkage strain (author's interpretation) .....	33
Figure 3.5 Concrete placing temperature towards adiabatic temperature rise (ACI Committee 207, 2007).....	33
Figure 3.6 Temperature rise development for 1 <sup>st</sup> model division (author's interpretation).....	35
Figure 3.7 Cumulative temperature rise development for 2 <sup>nd</sup> model division (author's interpretation).....	35
Figure 3.8 On-site formwork support by shoring system (source: project's construction drawings and author's documentation on site).....	36
Figure 3.9 Approach of pure shear state: (A) reference represented in principal basis, (B) deformation configured corresponds to principal stretches, (C) pure shear state represented in reference basis, (D) deformation configured corresponds to reference stretches (Latorre and Montáns, 2014).....	38

Figure 3.10 Strain gradient depending on the slip plane: (A) beam bending as whole division, (B) rectangular domains as smaller divisions (Bertram and Forest, 2020) .....	39
Figure 4.1 Research flowchart .....	42
Figure 4.2 Workflow of Fortran subroutines linked to Abaqus iterative solver. ....	43
Figure 4.3 Representation of simplified 3D Abaqus model.....	46
Figure 4.4 Mesh sizes examination graph.....	49
Figure 4.5 Assembled part modules with assigned meshing. ....	49
Figure 4.6 Fortran script brief explanation.....	51
Figure 4.7 Color gradation scale for strain gradients .....	52
Figure 5.1 Entire span crack documentation (source: PT Adhi Karya documentation, enhanced by author) .....	54
Figure 5.2 Overall strain limit performance for 1 <sup>st</sup> model division .....	59
Figure 5.3 Model B and Model C time-dependent strain history.....	64
Figure 5.4 Overall strain limit performance for 2 <sup>nd</sup> model division.....	68
