I. INTRODUCTION 1
1.1. Background 1
1.2. Issues 3
1.3. Objective of Research 4
1.4. Utilization of Research 4
II. LITERATURE REVIEW AND THEORETICAL FOUNDATION 6
2.1. Literature Review 6
2.2. Theoretical Foundation 12
2.3. Hypothesis 13
III. METHODOLOGY 14
3.1. Materials and Tools 14
3.2. Time and Place 14
3.3. Experimental Design 15
3.4. Observation and Data Collecting 16
3.5. Data Analysis 25
IV. RESULT 28

4.1. Data Distribution of the Architectural and Bark Variables of the F1 Population and the Clones 28
4.2. Broad-Sense Heritability (H^2) of Architectural and Bark Variable Categories in the F1 Population 37
4.3. Principal Component Analysis (PCA) of Key Architectural Traits and Agglomerative Hierarchical Clustering (AHC) of the F1 Population 38
4.4. Kendall correlation test of all observed traits 42
4.5. Key trait scores for each genotype in the F1 population for breeding guide . 48
V. DISCUSSION 50
5.1. Type of Crown for Specific Intercropping System 52
5.2. Architectural Characteristics Supporting Wind Tolerance 57
5.3. Architectural Characteristics for Latex Yield and Wood 64
5.4. Tree Architecture Typology for Rubber-Based Agroforestry System (RAS) .. 65
VI. CONCLUSION 69
VII. LIMITATION AND FUTURE PERSPECTIVE 71
