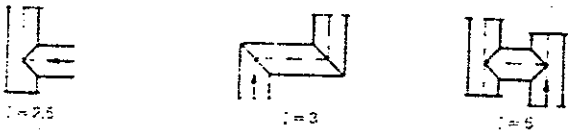
			Form I	II	III	IV

Form		d/D =	0.5	0.6	0.7	0.8	0.9
I		ζ ≈	0.56	0.41	0.26	0.13	0.04
II for	α = 8°	ζ ≈	0.07	0.05	0.03	0.02	0.01
	α = 15°	ζ ≈	0.15	0.11	0.07	0.03	0.01
	α = 20°	ζ ≈	0.23	0.17	0.11	0.05	0.02
III		ζ ≈	4.80	2.01	0.88	0.34	0.11
IV for 20° < α ≤ 40°		ζ ≈	0.21	0.10	0.05	0.02	0.01

Fig. 18: Determination of head losses H_v in valves and fittings; flow velocity v relating to the actual cross-sectional area through which the fluid flows

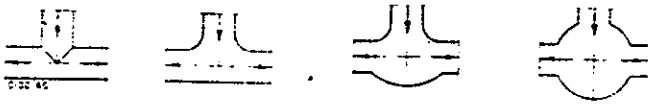
Knee piece	α	45°		60°		90°	
		Surface		Surface		Surface	
		smooth	rough	smooth	rough	smooth	rough
	ζ	0.25	0.35	0.50	0.70	1.15	1.30

Combinations with 90° knee pieces



ζ = 2.5 ζ = 3 ζ = 6

Transition of flow



with sharp edges ζ = 1.3

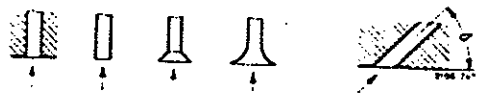
rounded with straight bottom ζ = 0.7

spherical with inward-rounded neck ζ = 0.9

spherical ζ = 2.5 to 4.5

Fig. 19: Illustration of fittings with related loss coefficients ζ

Inlet pipe fittings:



Inlet edge

sharp ζ ≈ 0.5 3

chamfered ζ ≈ 0.25 0.55 0.20 0.05

for δ = 75° 60° 45°
ζ ≈ 0.6 0.7 0.8

Elbows:

Cast elbows 90°, R = D + 100 mm, all nominal size ζ ≈ 0.5

D : diameter
R : jari-jari

Pipe bends 90°, R = 2 to 4 × D

Nominal size DN	50	100	200	300	500
ζ	≈ 0.26	0.23	0.21	0.19	0.18

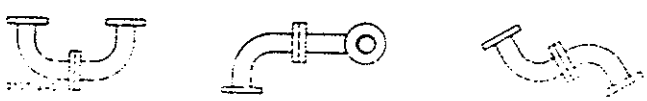
If the deflection angle only amounts to the above ζ values should be multiplied by	60°	45°	30°	15°
	0.85	0.7	0.45	0.3

Knee pieces:

Deflection angle	90°	60°	45°	30°	15°
ζ	≈ 1.3	0.7	0.35	0.2	0.1

Combinations of elbows and pipe bends.

The ζ value of the single 90° elbow should not be doubled, but only be multiplied by the factors indicated to obtain the pressure loss of the combination elbows illustrated:



1.4 1.6 1.8

[1] If the narrowest shut-off diameter d_E is smaller than the nominal diameter DN, the loss coefficient ζ must be increased by $(DN/d_E)^x$, with x = 5 to 6
[2] In the case of partial opening, i.e. low flow velocities, the loss coefficients increase
[3] Designs: cf. page 15

Guide to values of requisite basic rating life L_{10h} for different classes of machines

Class of machine	L_{10h} operating hours
Domestic machines, agricultural machines, instruments, technical apparatus for medical use	300 to 3 000
Machines used for short periods or intermittently: Electric hand tools, lifting tackle in workshops, construction machines	3 000 to 8 000
Machines to work with high operational reliability during short periods or intermittently:: Lifts, cranes for packaged goods or slings of drums, bales etc.	8 000 to 12 000
Machines for use 8 hours per day but not always fully utilised: Gear drives for general purposes, electric motors for industrial use, rotary chrushers	10 000 to 25 000
Machines for use 8 hours per day and fully utilised: Machine tools, woodworking machines, machines for the engineering industry, cranes for bulk materials, ventilator fans, conveyor belts, printing equipment, seperators and centrifuges	20 000 to 30 000
Machines for continuous use 24 hours per day: Rolling mill gear units, medium sized electrical machinery, compressors, mine hoists, pumps, textile machinery	40 000 to 50 000
Water works machinery, rotary furnaces, cable stranding machines, propulsion machinery for ocean-going vessels	60 000 to 100 000
Pulp and papermaking industry, large electric machinery, power station plant, mine pumps and mine ventilator fans, tunnel shaft bearings for ocean-going vessels	~ 100 000

Notes (1) The letter n indicates the number of bush holes or bolt holes.
(2) The letter t indicates the clearance produced at the time of assembling the coupling bodies, and is equivalent to the thickness of coupling bolt washer.

Remarks 1. The drawn-out length of bolt indicates the dimension from the shank end.
2. The screw hole to facilitate the drawing out of a coupling from a shaft is allowed to make optionally.

1. The hexagon nuts shall be such that of Class 1 ordinary finish specified in JIS B 1181, of which strength class shall be 4 and thread accuracy 6 H (or Class 2).
2. The spring washers shall be No. 2 S specified in JIS B 1251.
3. The dimensions of width across flats are in accordance with JIS B 1002. The dimensional tolerance shall be of Class 2.
4. The shape and dimensions of the screw end shall be same as the half dog point specified in JIS B 1003.
5. The accuracy of the screw thread shall conform to 6 g (or Class 2) of JIS B 0209.
6. The portion (A) may be either tapered or terraced.
7. The length x may be constituted either by an incomplete-threads or by an under-cut for thread cutting. However, a length of approximately two threads shall be taken for x in the case of the incomplete-threads.
8. Bushing may be formed either to cylindrical shape or to spherical shape. When the bushing is of cylindrical shape, both ends of external periphery shall be chamfered.
9. The bushing may provide metallic lining.
