ABSTRACT	xvii
ABSTRACT	xix
I INTRODUCTION	1
1.1 Research Background	1
1.2 Research Problem Formulation	9
1.3 Research Objectives and Benefits	11
1.4 Literature Review	13
1.5 Research Methodology	22
II BASIC THEORY	24
2.1 Cervical Cancer	24
2.2 Immune System	27
2.3 Immunotherapy For Cervical Cancer	29
2.4 Orthogonal Function	32
2.5 Reaction Diffusion Equation	34
2.6 The Method of Separation of Variables	36
2.7 Perturbation Theory	38
2.8 Dominant Balance Technique	42
2.9 Triangular Decomposition Method	43
2.10 The Bisection Method	44
2.11 Spatial Temporal Model of the Interaction between the Immune System and Cancer Cells	46
III ACCURATE ROOT APPROXIMATIONS OF DEGREE FI- VE POLYNOMIAL EQUATIONS	50
3.1 On the Accuracy of an Approximation of a Real or Complex Root for all $\varepsilon \in (0, \varepsilon_0]$	50

3.2	Example: a Polynomial Equation of Degree Five	53
3.2.1	Two real roots using straightforward perturbation expansions where $\alpha = 0$	56
3.2.2	Approximation for the Large Roots using Perturbation Expansion	59
3.3	An Algorithmic Approach to Approximate a Root	69
IV	ACCURATE APPROXIMATE ROOTS OF DEGREE FIVE POLYNOMIAL OF THE NON TRIVIAL EQUILIBRIUM POINTS IN CANCER IMMUNE KIRSCHNER AND PANETTA MODEL	72
4.1	Non Trivial Equilibrium Points in Cancer Immune Kirschner and Panetta Model	72
4.2	Comparison Local Non Trivial Solutions with Numerical Simulation Results	82
V	EXACT SOLUTIONS FOR A LINEAR THREE DIMENSIONAL REACTION DIFFUSION SYSTEM	89
V	CONCLUSION, ANALYTICAL NUMERICAL APPROXIMATIONS OF THE SOLUTIONS OF A SPATIAL MODEL DESCRIBING CANCER AND IMMUNE INTERACTIONS	123
6.1	An Analytical Approach to Study the Reaction-Diffusion Process Equation (6.11) - (6.13)	129
6.2	Comparison of the Numerical Results for the Truncated Problem with those for the Full Problem	134
6.2.1	Cancer Free Equilibrium point and stability	134
6.2.2	the Numerical Results for the Truncated Problem	136
6.3	Simulation of the Truncated System for Different Time-and Space Dependent Immunotherapies	143
V	CONCLUSIONS AND RECOMMENDATIONS	150
7.1	Conclusions	150
7.2	Recommendations	152
