

This report summarizes my internship experience as a Risk Management Intern at Ernst & Young (EY) Indonesia under the Enterprise Risk Management team. During the internship, I supported risk consulting projects by conducting benchmarking research, reviewing OJK regulations, and preparing presentation materials. I identified efficiency challenges in manual documentation and data formatting processes. The analysis suggests that implementing intelligent automation supported by human oversight (human-in-the-loop) can improve productivity without compromising accuracy. This internship also enhanced my communication, adaptability, and problem-solving skills in a professional work environment.
