ABSTRACT

BKPH Tangen is an example of Perum Perhutani area that have been unproductive condition for long ago. There were many way on forest plantation, but the result did not satisfy.

Social forestry programme is one of forest development means , involve PS and MR. The object of this research is reach out the reasons of forest development failure and social economic forest dwellers that interlaced with forest development. To fulfil the object, datas gathering was applied and analysed them in qualitative description. The datas are from interview with respondent in Terso, also from BKPH Tangen and local government office.

The failure of forest development was analysed by trajectory the forest management history, forest land inventore and even age forest before replantation were applied, and the facts be able to gathered in research. The condition of social economic forest dwellers is indicated by characteristic of total inhabitant, land use, animal hasboundary, needs for animal feeds and firewood, and life standart of local people.

The result of this showed that the failure of forest plantation in BKPH Tangen are caused by land physical condition, local people pressure on land so high, poverty, and less attention of social economic problem. Based on the research give result is contributing on equally input value was 29,3% (Rp 130.867,-/person/year). Animal feeds need was 7.577.400 kg/year be able to fulfilled by MR (7.609.375 kg/year). While the firewood productivity was 4,2 m³/ha/year be able to fulfil local firewood need (1.023,168 m³/year).
