

ENDORSEMENT PAGE	ii
STATEMENT	iii
PAGE OF DEDICATION	iv
PREFACE	v
CONTENTS	vi
LIST OF TABLES.....	ix
LIST OF FIGURES	x
NOMENCLATURE AND ABBREVIATION	xii
INTISARI.....	xiii
ABSTRACT	xiv
CHAPTER I INTRODUCTION	1
1.1 Background	1
1.2 Problem Statement.....	3
1.3 Objectives	3
1.4 Scope and Limitations	3
1.5 Benefits	4
1.6 Outline.....	4
CHAPTER II LITERATURE REVIEWS AND THEORETICAL FOUNDATIONS	6
2.1 Literature Reviews	6
2.1.1 Permanent Magnet Synchronous Motor (PMSM) Modelling.....	6
2.1.2 Field-Oriented Control (FOC).....	6
2.1.3 Embedded Inverter Control Implementation.....	7
2.1.4 Embedded Motor Control Implementation	7
2.1.5 Hardware-In-The-Loop (HIL) Simulation	7
2.2 Theoretical Foundations	10
2.2.1 Permanent Magnet Synchronous Motor (PMSM)	10
2.2.1.1 Types	10
2.2.1.2 Equivalent Circuit and Equations	11
2.2.1.3 Transfer Function and Mathematical Model	13
2.2.2 Three-Phase Voltage Source Inverter (VSI)	15
2.2.3 Field-Oriented Control (FOC).....	16
2.2.3.1 Feedback Control and Reference Frame Transformations	16
2.2.3.2 Controller	20
2.2.3.3 Feedforward Control	23
2.2.4 Space Vector Pulse Width Modulation (SVPWM)	24
2.2.4.1 Inverse Park Transformation	24

2.2.4.2	Base Vectors and Angle Sectors	25
2.2.4.3	Base Vector Time Averaging	26
2.2.4.4	Symmetrical SVPWM Strategy	27
CHAPTER III METHODOLOGY		30
3.1	Tools and Materials	30
3.2	Work Flow	31
3.2.1	Closed-Loop System Design	33
3.2.2	Simulation Design	34
3.2.2.1	Permanent Magnet Synchronous Motor (PMSM) Model	34
3.2.2.2	Three-Phase Voltage Source Inverter (VSI) Model	36
3.2.2.3	Hardware-in-the-Loop (HIL) Simulation Design	37
3.2.2.4	PLECS Simulation for Feasibility Testing	41
3.2.3	Feedback Measurement Acquisition	42
3.2.3.1	Instantaneous Sampling	42
3.2.3.2	Low-Pass Filter (LPF)	43
3.2.4	Control Scheme	45
3.2.4.1	Discrete PI Controller	45
3.2.4.2	Control Bandwidth	45
3.2.4.3	Open-Loop and Closed-Loop Control Scheme.....	48
3.2.5	SVPWM Implementation	49
3.2.5.1	Inverse Park Transformation	49
3.2.5.2	SVPWM Vector Angle Sector Detection	50
3.2.5.3	SVPWM Vector Period Calculation	50
3.2.6	Microcontroller Configuration.....	51
3.2.6.1	Clock Configuration	51
3.2.6.2	Symmetrical PWM Generation for Symmetrical SVPWM	51
3.2.6.3	PWM Dead Time Delay	55
3.2.6.4	Injected Analog-to-Digital Conversion (ADC) for In- stantaneous Sampling.....	58
3.2.6.5	Pin Assignments	59
CHAPTER IV RESULTS AND DISCUSSIONS		62
4.1	Preliminary System Test	62
4.2	LPF Test	62
4.3	Microcontroller Synchronization.....	66
4.3.1	Symmetrical PWM.....	66
4.3.2	Triggered Sampling and Control Loop Period.....	67
4.4	SVPWM Test.....	67
4.4.1	Dead Time Delay.....	68
4.4.2	Voltage Waveform	68

4.4.3	Vector Magnitude	69
4.4.4	Vector Angle	70
4.5	FOC Test	71
4.5.1	Open-Loop Test	71
4.5.2	Closed-Loop Test	73
4.5.2.1	Step Response and Three-Phase Waveforms	73
4.5.2.2	Dynamic Response	76
4.5.2.3	Steady-State Output Accuracy and Linearity	77
CHAPTER V CONCLUSION AND FUTURE WORKS		80
5.1	Conclusion	80
5.2	Future Works	80
REFERENCES		81
APPENDIX		L-1
L.1	STM32 NUCLEO-F446RET6 Programming	L-1
L.1.1	Source Code in C (main.c) via STM32CubeIDE	L-1
L.1.2	Configurations via STM32CubeMX	L-13
L.2	PLECS HIL Parameter Code	L-15
L.3	MATLAB Code	L-17
L.4	Test Bench	L-21
