TABLE OF CONTENTS	viii
LIST OF FIGURES	x
NOMENCLATURE	xii
INTISARI	xiii
ABSTRACT	xiv
I INTRODUCTION	1
1.1. Background	1
1.2. Main Issue	2
1.3. Research Purposes	3
1.4. Related Work	4
1.5. Research Methodology	6
1.6. Outline of the Research	7
II PRELIMINARIES	9
2.1. Elementary Number Theory	9
2.2. Graph Theory	16
2.2.1. Subgraph	24
2.2.2. Connectivity of A Graph	26
2.3. Graph Isomorphism	34
2.4. Graph Coloring	36
2.4.1. Graph Operations	38
2.4.2. Classes of Graphs	41
2.5. Group Theory	45
2.5.1. Subgroup	52
2.5.2. Cyclic Groups	57
2.5.3. On Coset and Lagrange's Theorem	62
2.5.4. Homomorphism of Groups	66
III BI-CAYLEY GRAPH OVER CYCLIC GROUPS	73

3.1. Cayley Graphs	73
3.2. Bi-Cayley Graphs	79
3.3. Cyclic Group Structure	82
3.4. Properties of Bi-Cayley Graph $\Gamma = Cay(G, S_1, S_2, S_3)$	84
3.4.1. General Structure and Basic Counting	84
3.4.2. Graph Connectivity	87
3.4.3. Girth Number	88
3.4.4. Clique Number	90
3.4.5. Chromatic Number	94
3.4.6. Graph Diameter	103
3.4.7. Independence Number	113
3.5. General Result on Arbitrary Finite Group	127
3.5.1. General Structure	127
3.5.2. Graph Connectivity	131
3.5.3. Clique Number	133
3.5.4. Chromatic Number	135
IV SUMMARY	140
4.1. Conclusion	140
4.2. Advice	141
REFERENCES	143
A APPENDIX	144
