

Table of Contents

Abstract.....	1
1. Introduction.....	2
2. Literature Review.....	3
2.1. The Sustainable Livelihoods Framework and Energy Access.....	3
2.2. Human Capital and Clean Energy Adoption.....	4
2.3. Financial Capital and Clean Energy Adoption.....	5
2.4. Physical Capital and Clean Energy Adoption.....	6
2.5. Social Capital and Clean Energy Adoption.....	7
2.6. Natural Capital and Clean Energy Adoption.....	8
2.7. Conceptual Framework and Hypothesis Development.....	9
3. Data and Methodology.....	10
3.1. Data Source.....	10
3.2. Research Design.....	10
3.3. Variables Operationalization.....	11
3.3.1. Dependent Variables.....	11
3.3.2. Independent Variables.....	11
3.3.3. Control Variables.....	13
3.4. Model Specification.....	13
3.5. Estimation Strategy.....	14
4. Results and Discussion.....	15
4.1. Descriptive Statistics.....	15
4.1.1. General Village Characteristics.....	15
4.1.2. Operationalizing State Capacity (The SKTM Paradox).....	17
4.1.3. Operationalizing Financial Capital (The Geographic Mismatch).....	17
4.1.4. Operationalizing Economic Structure.....	18
4.1.5. Regional Distribution of Natural Capital.....	18
4.2. Regression Results: Determinants of Clean Energy Adoption.....	19
4.2.1. Model 1: Determinants of Collective (Public-Good) Adoption.....	20
4.2.2. Model 2: Analysis of Household Solar Adoption.....	22
4.2.3. Comparing Adoption Models: Public Micro-Hydro vs. Private Solar.....	23
5. Conclusion and Implications.....	25
5.1. Conclusions.....	25
5.2. Limitations.....	26
5.3. Literature Implications and Suggestions for Future Research.....	26
References.....	28
Appendix	36
A.1. The Logic of Data Operationalization.....	36

A.2. Stata Do-files.....39
