NOMENCLATURE	xvi
ABSTRAK	xx
ABSTRACT	xxi
I INTRODUCTION	1
1.1. Research Background	1
1.2. Research Questions	6
1.3. Research Objectives	7
1.4. Literature Review	7
1.5. Research Methodology	9
II THEORETICAL BACKGROUND	12
2.1. Mortality and Cause-of-Death Data	12
2.1.1. Demographic Events and Rates	12
2.1.2. Age- and Period-Specific Mortality Rates	13
2.1.3. Age, Period, and Cohort Classification	13
2.1.4. Cause-Specific Mortality	14
2.1.5. Classification of Causes of Death	15
2.2. Vectors and Matrices	16
2.2.1. Basic Notations	16
2.2.2. Matrix Operations	17
2.2.3. Transpose and Euclidean Norm	18
2.2.4. Square and Diagonal Matrices	18
2.2.5. Positive Definite Matrices	19
2.3. Compositions and Simplices	20
2.3.1. Compositions	20

2.3.2. Simplex	21
2.3.3. Additive Log-Ratio Transformation	22
2.4. Basic Probability and Random Variables	25
2.4.1. Random Variables	25
2.4.2. Probability Distributions	26
2.4.3. Expectation and Variance	26
2.5. Multivariate Random Variables	27
2.5.1. Mean Vector and Covariance Matrix	28
2.5.2. Multivariate Normal Distribution	29
2.6. Dirichlet Distribution	30
2.6.1. Gamma and Beta Functions	30
2.6.2. Dirichlet Distribution Definition	32
2.6.3. Mean-Concentration Parameterization	33
2.6.4. Mean and Variance of the Dirichlet Distribution	34
2.7. Bayesian Analysis	38
2.7.1. Bayesian Inference	38
2.7.2. Bayesian Interval Estimation	39
2.7.3. Bayesian Hierarchical Models	40
III AGE-PERIOD-COHORT HIERARCHICAL BAYESIAN DIRICHLET	
MODELING OF CAUSE-SPECIFIC MORTALITY USING HAMIL-	
TONIAN MONTE CARLO	41
3.1. Compositional Representation of Cause-of-Death Data	42
3.2. Dirichlet Distribution as a Likelihood for Cause-of-Death Composi-	
tions	43
3.3. Regression Structure	47
3.3.1. Additive Logratio transformation	48
3.3.2. Regression specification	49
3.4. Identifiability in Age-Period-Cohort Models	50
3.4.1. Deterministic components	52
3.4.2. Stochastic components	52
3.5. Matrix Representation of the Linear Predictor	54
3.6. Age-Period-Cohort Model Specifications	60
3.6.1. Model A: stochastic cohort effects	60
3.6.2. Model B: stochastic period effects	61
3.7. Bayesian Hierarchical Specification	62
3.7.1. Prior Distributions	62
3.7.2. Posterior Distribution	64

3.7.3. Hierarchical Structure	66
3.8. Posterior Estimation and Computation	67
3.8.1. Hamiltonian Monte Carlo (HMC)	68
3.8.2. Tuning Parameters and Implementations	71
3.8.3. The No-U-Turn Sampler (NUTS)	74
3.8.4. Adaptive Warm-Up and Implementation Details	76
3.8.5. Convergence Diagnostics	78
3.8.6. Posterior Summaries and Inference	80
3.9. Predictive Accuracy and Model Comparison	82
3.9.1. Expected Log Pointwise Predictive Density	82
3.9.2. Approximation using Leave-One-Out Cross-Validation	83
3.9.3. Pareto-Smoothed Importance Sampling	84
3.9.4. Error-Based Predictive Measures	84
IV RESULTS AND DISCUSSION	86
4.1. Data Overview and Descriptive Analysis	86
4.1.1. Data Structure and Study Population	87
4.1.2. Data Preprocessing	92
4.1.3. Descriptive Analysis	98
4.2. Model Estimation and Convergence Diagnostics	106
4.2.1. Estimation Setup	106
4.2.2. Convergence Diagnostics	107
4.3. Model Fit and Posterior Diagnostics	111
4.3.1. Fitted vs Observed Patterns	111
4.3.2. Residual Diagnostics	114
4.3.3. Posterior Predictive Checks	117
4.4. Model Comparison	122
4.4.1. Error-Based Goodness of Fit	122
4.4.2. Predictive Model Comparison	123
4.5. Comparison of Model Predictions	125
4.6. Selected Model and Interpretation	128
4.6.1. Age Effects	128
4.6.2. Period Effects	131
4.6.3. Cohort Effects	133
V CONCLUSIONS AND RECOMMENDATIONS	138
5.1. Conclusions	138
5.2. Recommendations	140
