- Figure 2 Breast cancer incidence, mortality and mortality rate: 12  
incidence rate ratio (MR:IR) for Asia-Pacific countries, 2012.  
Notes: Rates were age-standardized to the World Standard  
Population 17 and expressed per 100,000 females. All  
categories were based on quintiles. Data source:  
GLOBOCAN (Ferlay et al., 2013)
- Figure 3 The structure model of NGX6a and NGX6b (Wang et al., 19  
2010). NGX6a total length is 472 aa, highly homologous with  
NGX6b (338 aa). Their first 273 aa is identical, and both of  
them contain a common EFG-like domain. NGX6a has 7  
transmembrane domains (blue portion), while NGX6b contain  
only 2 domains.
