DAFTAR GAMBAR

Halaman

Figure 1. Study area within the concession of PT. Itci Hutani Manunggal, Penajam Paser Utara Regency, East Kalimantan, Indonesia..... 28

Figure 2. Spatial distribution of field sampling plots used for in-situ data collection across Compartments A, B, and C. 29

Figure 3. Canopy Height Model (CHM) and LiDAR point cloud vertical profiles for the study area. Panels (a), (b), and (c) correspond to Compartment A, Compartment B, and Compartment C, respectively. The CHM maps (left) illustrate the spatial distribution of canopy height derived from LiDAR data, whereas the side profiles (right) present the vertical structure of the terrain and forest canopy along selected transects. 29

Figure 4. UAV flight planning and aerial image acquisition design over the study area: (a) compartment A (b) compartment B and C. 30

Figure 5. Tree detection and crown delineation derived from aerial imagery. (a) Detected tree locations represented by grid-based segmentation, (b) individual tree crown delineation results. 30

Figure 6. Scatter plots of observed versus predicted above-ground biomass (AGB) for models based on (a) aerial imagery, (b) LiDAR, and (c) combined aerial imagery and LiDAR. The dashed red line indicates the 1:1 relationship. 30

Figure 7. Relative importance of predictor variables in the Random Forest models for estimating plot-level above-ground biomass (AGB) using (a) aerial imagery, (b) LiDAR, and (c) combined predictors. 31

Figure 8. Distribution of residuals for plot-level above-ground biomass (AGB) predicted from (a) aerial imagery, (b) LiDAR, and (c) combined aerial imagery and LiDAR..... 31

DAFTAR TABEL

Halaman

Table 1. Summary statistics of field-measured stand attributes and predicted stand attributes of Eucalyptus pellita used as reference data from sample plots. 27

Table 2. Plot-level observed and predicted above-ground biomass (AGB Mg ha^{-1}) derived from aerial imagery, LiDAR, and combined models..... 27

Table 3. Validation statistics of Random Forest models for estimating plot-level above-ground biomass (AGB) from aerial imagery, LiDAR, and combined predictors. 28

Table 4. Shapiro-Wilk normality test and paired t-test results comparing observed and predicted above-ground biomass (AGB) across model types. 28
