HALAMAN PENGESAHAN ..... **iii**
PERNYATAAN ..... **iv**
FOREWORD ..... **v**
TABLE OF CONTENTS ..... **vi**
LIST OF TABLES ..... **viii**
LIST OF FIGURES ..... **ix**
INTISARI ..... **xi**
ABSTRACT ..... **xii**
CHAPTER 1 INTRODUCTION **1**
1.1 Background 1
1.2 Problem Statement 4
1.3 Problem Limitations 4
1.4 Objectives 5
1.5 Benefits 5
CHAPTER 2 LITERATURE REVIEW **6**
2.1 Understanding of ENSO 6
2.2 ENSO Modeling 9
2.3 The IO Basin 11
2.4 The ITF's Role 12
CHAPTER 3 THEORETICAL FRAMEWORK **15**
3.1 The Governing Equations 15
3.2 Linear Stability Analysis 20
CHAPTER 4 METHODS **22**
4.1 Parameterization 22
4.2 Stochastic Noise and Periodic Forcing Term Addition 25
4.3 Data and Computational Resource 26
4.4 Research Flow Chart 27
CHAPTER 5 RESULTS AND DISCUSSIONS **29**
5.1 The Baseline Dynamics 29

LIST OF FIGURES

Figure 1.1 Illustration of the ITF flowing from the Pacific to the IO 3

Figure 2.1 A picture example of a Hadley cell over the tropical region (Fiehn, 2017) 6

Figure 2.2 The Walker Circulation over the equatorial Pacific (Adamson, 2019). 7

Figure 2.3 Schematics of the Thermocline Layer 8

Figure 2.4 Schematics of the four phases of the RO: (a) the warm phase, (b) the warm to cold transition phase, (c) the cold phase, (d) the cold to warm transition phase. The rectangular box represents the equatorial Pacific basin, the elliptical circle represents the SST anomaly, the thin and filled arrows represent wind stress anomaly associated with the SST anomaly, and the thick unfilled arrows represent the recharge/discharge of equatorial heat content caused by the Sverdrup transport. Each panel also shows the distribution of the thermocline depth anomaly (h) along the equator (Jin, 1997a). 11

Figure 3.1 Location of the Niño regions for measuring SST, the Niño-3.4 region here is denoted by T_{ENSO} (Sanabria, 2018) 16

Figure 3.2 The effects of (a) IOD and (b) ENSO on the total transport anomalies of the ITF through the Makassar Strait. The black line represents the total transport anomalies, the blue background is the DMI, and the red background is the SST anomaly for the Niño-3.4 region 18

Figure 4.1 The time series for (a) Niño-3.4 region SST anomaly and (c) the DMI and (b), (d) the corresponding Fast Fourier Transform respectively 24

Figure 4.2 Research Flow Chart 27

Figure 5.1 Simulated time series of the T_{ENSO} (red area), T_{IOD} (blue area), and ITF transport (black line) anomalies using (a) the Dormand–Prince method and (b) the stochastic Heun method and (c), (d) the corresponding phase space plots respectively for the unforced dynamics 30

Figure 5.2 Simulated time series using the Dormand–Prince method corresponding to different values of the annual cycle strength Ω: (a) 1.0; (b) 1.5; (c) 2.0; (d) 2.5 31

Figure 5.3 Phase space plots corresponding to different values of the annual cycle strength Ω: (a) 1.0; (b) 1.5; (c) 2.0; (d) 2.5. 32

Figure 5.4 Simulated time series using the stochastic Heun method corresponding to different values of σ: (a) 0.1; (b) 0.15; (c) 0.2; (d) 0.25; with the Ω set to 2.5. 33

Figure 5.5 Phase space plots corresponding to different values of σ: (a) 0.1; (b) 0.15; (c) 0.2; (d) 0.25; with the Ω set to 2.5 34

Figure 5.6 Simulated time series of the T_{ENSO} (red area), T_{IOD} (blue area), and ITF transport (black line) anomalies with $\Omega = 2.5$ and $\sigma = 0.25$ in 10 years using the stochastic Heun method 35

Figure 5.7 Time series for the observational data with the DMI and Niño-3.4 region SST anomalies scaled by 2 36
