Abstrak
Masa awal perkuliahan merupakan masa penuh tantangan dan seringkali memicu stres, kecemasan, dan depresi pada mahasiswa baru akibat kesenjangan antara tuntutan adaptasi dan kondisi aktual mahasiswa. Penelitian ini bertujuan untuk mengetahui peran *perceived social support* terhadap *adaptability* mahasiswa baru dan menganalisis status perantauan sebagai variabel moderasi dalam peran tersebut. Sejumlah 153 mahasiswa baru program sarjana Universitas Gadjah Mada tahun ajaran 2025/2026 berhasil dikumpulkan melalui kuesioner secara daring. Data dianalisis menggunakan *Moderated Regression Analysis* (MRA) melalui perangkat lunak Jamovi. Hasil analisis menunjukkan bahwa *perceived social support* berperan positif terhadap *adaptability* mahasiswa baru secara signifikan. Namun, status perantauan terbukti tidak memoderasi peran *perceived social support* terhadap *adaptability* mahasiswa baru.
Kata kunci: *adaptability, perceived social support, status perantauan, mahasiswa baru*

Abstract
The beginning of college is a challenging time that often triggers stress, anxiety, and depression in new college students due to the gap between transition pressures and their actual conditions. This study aims to determine the role of perceived social support on freshmen's adaptability and analyze relocation status as a moderating variable. A total of 153 undergraduate freshmen at Gadjah Mada University for the 2025/2026 were collected through an online questionnaire. Data were analyzed using Moderated Regression Analysis (MRA) with Jamovi. The results show that perceived social support significantly plays a positive role in freshmen's adaptability. However, relocation status is proven not to moderate the role of perceived social support on freshmen's adaptability.
