4.7.1 Hypothesis One (H1): Tactile visual cues in social media advertisements used by beauty brands have a positive effect on consumers' actual purchase behaviour 89

4.7.2 Hypothesis Two (H2): Tactile visual cues in social media advertisements used by beauty brands have a positive effect on consumer haptic imagery 91

4.7.3 Hypothesis Three (H3): Haptic imagery evoked by tactile visual cues in social media advertisements used by beauty brands has a positive effect on consumer product desire 93

4.7.4 Hypothesis Four (H4): Product desire evoked by tactile visual cues in social media advertisements used by beauty brands has a positive effect on consumers' actual purchase behaviour 95

4.7.5 Hypothesis Five (H5): Haptic imagery mediates the positive relationship between tactile visual cues in social media advertisements used by beauty brands and consumer product desire 97

4.7.6 Hypothesis Six (H6): Product desire mediates the positive relationship between consumer haptic imagery and purchase behaviour for beauty products advertised on social media 98

4.7.7 Hypothesis Seven (H7): Haptic imagery and product desire sequentially mediate the relationship between tactile visual cues in social media advertisements used by beauty brands and consumers' actual purchase behaviour, such that tactile visual cues positively influence haptic imagery, which in turn positively influences product desire, which subsequently leads to actual purchase behaviour 99
