

INTISARI

Fasilitas dan pelayanan kesehatan di sekolah sangat penting agar proses belajar mengajar siswa dapat mencapai hasil yang maksimal. Penelitian ini bertujuan untuk mendeskripsikan fasilitas pelayanan kesehatan dan harapan orang tua terhadap pelayanan kesehatan di sekolah dasar (SD).

Penelitian ini merupakan penelitian deskriptif dan dilakukan di SD Model Sleman Yogyakarta. Data diambil secara observasi dengan *checklist* dan survey dengan menyebarkan kuesioner kepada 150 orang tua atau wali siswa dari kelas III, IV dan V. Untuk menganalisis hasil data observasi peneliti merekap dan tabulasi berdasarkan tema-tema terkait fasilitas kesehatan dan untuk kuesioner menggunakan domain fasilitas atau alat kesehatan, aktivitas edukasi siswa dan tenaga medis dengan teknik analisis deskriptif kuantitatif dengan persentase.

Hasil penelitian observasi berkaitan dengan perlengkapan kesehatan, program aktivitas edukasi siswa, ketersediaan halaman bermain dan makan bersama, kamar mandi dan ruang kelas yang bersih sudah mencukupi di SD Model Sleman. Namun, sekolah masih tidak mempunyai tenaga medis seperti fasilitas pemeriksaan praktek dokter atau dokter gigi. Orang tua atau wali dari kelas III, IV dan V menunjukkan 91,33% sangat berharap ada kelengkapan ketersediaan fasilitas atau alat kesehatan, 87,33% orang tua berharap program aktivitas edukasi siswa terlaksana setiap tahun dan 72% orang tua berharap sekolah mempunyai ketersediaan tenaga medis.

Kata kunci: harapan, pelayanan kesehatan, sekolah dasar

ABSTRACT

Health facilities and services in schools are very important for the learning process students can achieve maximum results. This study aims to describe health service facilities and parents' expectations of health services in primary schools (SD).

This research is descriptive research and done in SD Model Sleman Yogyakarta. The data were taken by observation with checklist and survey by distributing questionnaires to 150 parents or guardians of class III, IV and V. To analyze the results of observational data of researchers recap and tabulation based on health facilities related theme and for questionnaire using facility or tool domain health, educational activities of students and medical personnel with quantitative descriptive analysis techniques with percentages.

The results of observational studies related to health equipment, student education activities program, the availability of playground and shared meals, clean bathrooms and classrooms are sufficient in SD Model Sleman. However, schools still do not have medical personnel such as medical examination facilities or dentists. Parents or guardians of class III, IV and V show 91.33% have high hope there is completeness of the availability of facilities or health equipment, 87.33% of parents expect the student educational program activities implemented every year and 72% of parents expect the school has the availability of energy medical.
