Abstrak

Aktivitas ekonomi yang dilakukan suatu rumahtangga bermacam-macam. Sumber pendapatan rumahtangga tani berasal dari kegiatan pertanian maupun non pertanian. Penelitian ini bertujuan mengetahui keragaman sumber pendapatan rumahtangga tani, tingkat kesejahteraan rumahtangga tani, dan hubungan sosial-ekonomi dengan tingkat kesejahteraan rumahtangga tani Desa Sumberagung, Kecamatan Jetis, Kabupaten Bantul. Metode penelitian dengan wawancara menggunakan kuesioner terhadap 94 responden. Teknik analisis data menggunakan metode deskriptif kuantitatif, *scoring* dan pembobotan, *crosstabs*, dan *regression analysis test*. Hasil penelitian adalah mayoritas rumahtangga memiliki 2 sumber pendapatan dari pertanian dan non pertanian. Mayoritas rumahtangga tani termasuk dalam golongan tingkat kesejahteraan sedang yaitu sebanyak 73 rumahtangga.

Hasil uji regresi variabel yang berpengaruh secara signifikan terhadap tingkat kesejahteraan rumahtangga tani, yaitu pendapatan kepala rumahtangga tani, total pendapatan rumahtangga tani, umur, dan pendidikan petani. Variabel yang tidak berpengaruh terhadap tingkat kesejahteraan rumahtangga tani yaitu pendapatan anggota rumahtangga tani, jumlah beban rumahtangga tani, keragaman pendapatan rumahtangga tani, dan luasan dan pemilik lahan pertanian.

Kata Kunci: Keragaman Sumber Pendapatan, Pertanian, Regression Analysis Test, Rumahtangga Tani, dan Kesejahteraan.

***DIVERSITY ANALYSIS OF FARMER HOUSEHOLD INCOME IN
SUMBERAGUNG VILLAGE, JETIS DISTRICT, BANTUL REGENCY***

Abstract

The economic activities carried out by a household vary. The source of farm household income comes from agricultural and non-agricultural activities. This study aims to determine the diversity of farm household income sources, the level of welfare of farm households, and socio-economic relations with the level of welfare of farmer households in Sumberagung Village, Jetis District, Bantul Regency. Research method by interview using questionnaire to 94 respondents. Data analysis techniques used quantitative descriptive methods, scoring and weighting, crosstabs, and regression analysis tests.

The result of the study is that the majority of households have 2 sources of income from agriculture and non-agriculture. The majority of farm households are included in the moderate level of welfare, namely 73 households. Variable regression test results that significantly influence the level of welfare of farmer households, namely the income of the head of the farm household, the total income of the farm household, the age and education of the farmer. Variables that have no effect on the level of farmer's household welfare are the income of farm household members, the amount of farm household expenses, the diversity of farm household income, and the extent and owner of agricultural land.

Keywords: Diversity of Income Sources, Agriculture, Correlation Test, Farmer Household, and Welfare.
