**Abstrak.** Kesehatan mental di tempat kerja semakin menjadi perhatian seiring dengan meningkatnya stres dan depresi di tempat kerja. *Psychological well-being* mampu menentukan cara individu menangani stres dan menghadapi berbagai tantangan kerja. Tujuan penelitian ini adalah menguji pengaruh *psychological capital*, *workplace spirituality*, dan *work-life balance* terhadap *psychological well-being*. Skala yang digunakan dalam penelitian adalah skala *psychological well-being*, skala *psychological capital*, skala *workplace spirituality*, dan skala *work-life balance*. Data penelitian dari 225 pekerja muda yang tergolong sebagai Generasi Y dianalisis dengan *Structural Equation Modeling* (SEM). Hasil uji analisis menunjukkan bahwa model hubungan antara *psychological capital*, *workplace spirituality*, dan *work-life balance* terhadap *psychological well-being* sesuai dengan data empiris. Lebih lanjut, hasil analisis menunjukkan bahwa *psychological capital* berpengaruh secara positif dan signifikan terhadap *workplace spirituality*, *psychological capital* berpengaruh secara positif dan signifikan terhadap *work-life balance*, *workplace spirituality* berpengaruh secara positif dan signifikan terhadap *work-life balance*, serta *work-life balance* berpengaruh secara positif dan signifikan terhadap *psychological well-being*.

Kata kunci: *psychological well-being*, *psychological capital*, *workplace spirituality*, dan *work-life balance*.

**Abstract.** Mental health at the workplace became a concern along with the increasing of stress and depression in the workplace. Psychological well-being was able to determine how individual cope with stress and dealing with various challenges in the workplace. The aim of this research was to explore psychological well-being by examining psychological capital, workplace spirituality, and work-life balance among 225 young workers as classified as Y Generation. Four measuring instruments were used in this study, consisted of: psychological well-being scale, psychological capital scale, workplace spirituality scale, and work-life balance scale. By using Structural Equation Modeling (SEM) analysis, the relational model of psychological capital, workplace spirituality, and work-life balance toward psychological well-being were fit with the empirical data. The result also indicated that there was a positive and significant effect of psychological capital to workplace spirituality, a positive and significant effect of psychological capital to work-life balance, a positive and significant effect of workplace spirituality to work-life balance, and a positive and significant effect of work-life balance to psychological well-being.

Keyword: *psychological well-being*, *psychological capital*, *workplace spirituality*, and *work-life balance*.
