

III.1. Introduction	32
III.2. Coal Characteristics, CO ₂ Sorption Behavior of Coal for Implication in Coalbed Methane (CO ₂ – ECBM)	32
III.2.1. CO ₂ Sequestration	32
III.2.2. Structure of coal	34
III.3. Coal characteristics under CBM and ECBM conditions	37
III.3.1. Adsorption isotherms	37
III.3.2. Desorption	41
III.3.3. Diffusion.....	41
III.3.4. Matrix Shrinkage and Swelling.....	43
III.4. Porosity and permeability.....	45
III.5. Enhanced Coalbed Methane	49
III.5.1. Production Enhancement.....	49
III.5.2. Gas transport in coal.....	50
III.6. Micro-CT imaging and microfluidics for understanding flow in coal seam reservoirs	53
III.7. Geomechanics and CO ₂ - ECBM and mechanical strength	54
III.7.1 Mechanical Strength Reduction	54
III.7.2 Development of Fracture Behavior, UCS and AE counts.....	57
III.8. Dynamic Permeability and Porosity Model and coupling factors.....	60
CHAPTER IV HYPOTHESIS AND RESEARCH METHODS	67
IV.1. Hypothesis.....	67
IV.2. Research Methods	67
IV.2.1. Samples Acquisition	68
IV.2.2. Samples Availability and Treatment.....	68
IV.3. Analysis Methods.....	70
IV.3.1. Coal Quality Analysis.....	70
IV.3.2. Rock Physics: Acoustic Emission before and after adsorption.....	71
IV.3.3. Sorption of Carbon Dioxide CO ₂ -ECBM by Volumetric Method	74
IV.3.4. Acoustic Emission to Determine the Fracture Behaviour.....	77

IV.3.5. Effects CO ₂ saturations of the coal's rock physics, CT Scan X-Ray Imaging	79
IV.4. Modelling Method.....	81
IV.4.1. Initial Coal Deposition Model.....	81
IV.4.2. Mathematical Model	82
IV.4.3. Numerical Simulation Model.....	83
IV.5. Flowchart.....	85
CHAPTER V INITIAL COALBED CONDITION AND PHYSICAL PROPERTIES	86
V.1. Introduction	86
V.2. Initial Rock Physics Characteristics	89
V.2.1. Initial permeability measurement from windows scan mapping.....	89
V.2.2 Initial Permeability and Porosity fraction using CT Scan Tomography	92
V.2.3 Initial porosity and permeability fraction using Sonic Travel Time	97
V.3 Proximate Analysis.....	99
V.4 Petrophysics Characteristics	103
V.5 CO ₂ Adsorption Capacity	104
CHAPTER VI CO₂ INTERACTION: IMPLICATIONS OF DYNAMIC CHANGES IN SORPTION KINETICS.....	106
VI.1. Introduction	106
VI.2. Rock Physic Evolution.....	107
VI.2.1. Porosity and permeability changes using CT Scan Tomography	107
VI.2.2. Porosity and permeability changes based on Acoustic Emission Test	109
VI.2.3. Newly approach: Window Scan Map, CT Scan and Acoustic Emission Test in order to obtain the Permeability and Porosity (Rock Physics) Evolution.....	113
VI.2.4. Permeability Reduction Calculation and Modelling.....	113
VI.3. Swelling, Pores Accessibility due to CO ₂ Sorption	117
VI.4. The mechanical behaviour of coal relating to CO ₂	117

CHAPTER VII CO₂-ECBMR NUMERICAL SIMULATION AND CONTROLLING FACTORS TO CO₂ ADSORPTION	132
VII.1. Introduction.....	132
VII.2. Numerical Simulation of CO ₂ Injection at Laboratory Condition Model...	133
VII.2.1 Matrix Moisture	134
VII.2.2 Gas Specific Gravity and Gas Mass Density	134
VII.3. NUMERICAL SIMULATION OF CO ₂ INJECTION AT RESERVOIR CONDITION MODEL	138
VII.3.1. CO ₂ Adsorption Capacity in Coalbed Storage Application.....	141
VII.3.2. Gas Flow Behaviour in ECBMR Application	143
VII.3.2.1. Production sensitivity based on cleat permeability.....	143
VII.3.2.2. Production sensitivity based on initial water saturation ...	143
VII.3.2.3. Production sensitivity based on coal porosity.....	143
VII.3.2.4. Production sensitivity based on well spacing	143
VII.3.2.5. Production sensitivity based on well number settings	143
VII.4. Discussion: Numerical Simulation	160
CHAPTER VIII CONCLUSION AND RECOMMENDATION.....	162
VIII.1. Conclusion	162
VIII.2. Recommendation	162
REFERENCES	163
APPENDIX	163
