

ABSTRACT

Sembilang National Park is representative of mangrove forest in South Sumatra Province. Restoration efforts needed for erosion control, restoration of fauna habitat and decrease the negative impact on areas that have been disrupted. Restoration is an effort to restore forest conditions in order to recover biodiversity, and other structures in the lowland forest. In the implementation of the restoration are the constraints of funds, technology, human resources.

The purpose of this research is to formulate strategies to achieve the synergies cooperation between Sembilang National Park and JICA in the future.
