

TITLEi
ENDORSEMENT PAGEii
PREFACEiii
ACKNOWLEDGEMENTSiv
ABSTRACTv
TABLE of CONTENTSvi
LIST of TABLES	..viii
LIST of FIGURESix
CHAPTER I INTRODUCTION1
A. Background1
B. Objectives3
C. Research Advantage3
D. Boundary Condition3
E. Research Originality4
CHAPTER II LITERATURE REVIEW6
A. Asphalt Concrete Wearing Course6
B. Asphalt Concrete Wearing Course Materials6
C. Durability Behavior of Paving Mixture9
CHAPTER III THEORITICAL APPROACH	..11
A. Durability	..11
B. Dry Compaction Test	..12
C. Indirect Tensile Strength (ITS) Test.	..14
D. Tensile Strength Ratio (TSR)	..15
E. Durability Index	..16
F. Marshall Test	..17
G. Marshall Criteria	..19

H. Retained Marshall Stability (RMS)	..26
I. Bantak and Clereng Aggregate	..27
 CHAPTER IV HYPOTHESIS	 ..30
 CHAPTER V RESEARCH METHODOLOGY	
A. Research Steps	..31
B. Material Properties	..31
C. Optimum Asphalt Content Design Phase	..32
D. Specimens Design Properties	..32
E. Research Equipment	..39
F. Research Constraint	..41
G. Research Procedure Flowchart	..44
	..45
 CHAPTER VI TEST RESULTS AND ANALYSIS	
A. Optimum Asphalt Content Design	..46
B. Mix Design Volumetric Properties	..46
C. The Specimens Results of Standard Process	..47
D. Indirect Tensile Strength Test and Tensile Strength Ratio	..47
E. Discussion on ITS and TSR	..49
F. Comparison of the ITS and TSR value	..50
G. Marshall Test and Retained Marshall Stability Results	..59
H. Comparison of the Marshall Stability and RMS value	..60
I. Discussion on Durability Index	..69
	..70
 CHAPTER VII CONCLUSION AND RECOMMENDATION	
A. Conclusion	..81
B. Recommendation	..81
	..83
