

This research is intended to analyze risk management in the construction and operational process of Base Transceiver Station managed by PT. Solusindo Kreasi Pratama (SKP). SKP, on running its businesses which are building and managing BTS, needs to pay attention to risk management in order to avoid any loss. A method used for risk analysis in this research is Project Management Book of Knowledge (PMBOK) which is an international standard regulating fundamental system in project management. Data processed in this research taken from interviews with relevant managers. Analysis to identify adverse risk in SKP is created based on data processed. Based on this research, SKP is expected to take any necessary steps to control risks and prepare for any method to monitor and control in order to be able to minimize prospective risks.
