

INTISARI

Kinerja gapoktan penting dalam proses pembangunan pertanian. Penelitian ini bertujuan untuk mengetahui persepsi petani terhadap kinerja gapoktan di Desa Laban, mengetahui faktor-faktor yang mempengaruhi persepsi petani terhadap kinerja gapoktan di Desa Laban, dan mengetahui pengaruh persepsi tentang kinerja gapoktan terhadap kinerja gapoktan di Desa Laban Kecamatan Mojolaban, Kabupaten Sukoharjo. Metode dasar yang digunakan dalam penelitian ini adalah metode deskriptif dan kuantitatif dengan teknik wawancara. Pengambilan sampel responden petani anggota gapoktan adalah dengan sensus. Total sampel petani anggota gapoktan berjumlah 35. Metode analisis yang digunakan adalah uji proporsi, analisis regresi linier berganda, dan analisis regresi linier sederhana. Hasil penelitian menunjukkan bahwa >50% petani memiliki persepsi yang baik terhadap kinerja gapoktan di Desa Laban. Akses terhadap informasi pertanian memiliki pengaruh positif pada persepsi petani terhadap kinerja gapoktan di Desa Laban. Faktor yang tidak berpengaruh nyata pada persepsi petani terhadap kinerja gapoktan di Desa Laban adalah umur, pendidikan, pengalaman berusahatani, keterlibatan dalam gapoktan, kegiatan gapoktan, dan peran PPL. Persepsi petani tentang kinerja gapoktan tidak mempengaruhi kinerja gapoktan di Desa Laban.

Kata Kunci : persepsi, kinerja, gapoktan

ABSTRACT

The performance of farmer group association has been regarded important in agriculture development process. This study aims to determine farmer's perceptions of the performance of farmer group association in Laban Village, find out the factors that influence farmer's perceptions of farmer group association performance in Laban Village, and find out the influence of perceptions about farmer group association performance on farmer group association performance in Laban Village, Mojolaban Subdistrict, Sukoharjo District. The basic method used in this study is descriptive and quantitative methods with interview techniques. Selection of respondents from gapoktan members is by using census. The total sample of farmers in farmer group association members is 35. The analytical methods used are proportion test, multiple linear regression analysis, and simple linear regression analysis. The results showed that > 50% of farmers had a good perception of the performance of farmer group association in Laban Village. Access to agricultural information has a positive influence on farmers' perceptions of the performance of farmer groups in Laban Village. Factors that did not significantly influence farmers' perceptions of farmer group association performance in Laban Village, were age, education, farming experience, involvement in farmer group association, farmer group association activities, and the role of agriculture extension staff. Farmers' perceptions of farmer group association performance did not affect the performance of farmer group association in Laban Village.

Keywords: perception, performance, farmer group association
