Title page	i
Approval page	ii
Surat pernyataan perbaikan disertasi	iii
Surat pernyataan bebas plagiasi	iv
Preface	v
Table of content	viii
List of tables	x
List of figures	xi
List of attachments	xii
List of abbreviations	xiii
Abstract	xv
Chapter I. Introduction	
A. Research Background	1
B. Research Problems	6
C. Research Objectives	6
D. Research Benefits	7
E. Research Originality	7
Chapter II. Literature Review	
A. Literature Study	9
1. Immunobiology of Tuberculosis	9
2. Tuberculosis and Its Association with Lung Cancer	26
B. Theoretical Framework	38
C. Conceptual Framework	38
D. Hypothesis	39
Chapter III. Research Methodology	
A. Type of Study	40
B. Study Subject	40
C. Variable Identification	41
D. Operational Definition	41
E. Procedure	43

F. Data Analysis	48
G. Ethical Clearance	49
Chapter IV. Results and Discussion	
A. Results	
1) HKTB stimulation induced polarization towards the pro-inflammatory phenotype in macrophage of healthy subjects and lung cancer patients	50
2) <i>In-vitro</i> study confirmed the promotion to pro-inflammatory phenotype induced by HKTB	52
3) Heat-killed TB potentiated both macrophage models' cytotoxicity to lung cancer cells	56
4) Heat-killed TB altered distinct intracellular changes within macrophage and TEM models	59
B. Discussion	
1) Enhancement of pro-inflammatory profiles in classically activated- and tumor educated-macrophage upon HKTB stimulation	71
2) Distinct intracellular signaling regulation within classically activated- and tumor educated-macrophage upon HKTB stimulation	73
3) Tumor-educated macrophage response to heat-killed TB stimulation and its lung cancer cytotoxicity	78
4) Heat-killed <i>M. tuberculosis</i> as potential immunomodulator for cancer	81
Chapter V. Conclusion	
A. Conclusion	85
B. Burden and Limitation	86
C. Suggestions	86
References	88
Attachments	104

List of Tables

Table 1. Subject characteristics	50
Table 2. Cellular functions with profound molecular function activation or inhibition in TEM model compared to M model	61

List of Figures

Figure 1. Overview of the immune response in tuberculosis.	24
Figure 2. Summary of the potential association between TB and lung cancer: (left) protection by triggering activation and accumulation of immune cells, and (right) promotion of focal malignancy due to chronic inflammatory response.	34
Figure 3. Tumor-associated macrophage in tumor-microenvironment plays role in cancer initiation and promotion, immune suppression, metastasis and angiogenesis.	37
Figure 4. Generation of tumor-educated macrophage and PMA-stimulated macrophage from THP-1 cell line.	42
Figure 5. Experiment design by using different macrophage types with HKTb stimulation.	44
Figure 6. Flowcytometry analysis of mononuclear cells of healthy subjects and lung cancer patients upon stimulation with HKTb.	51
Figure 7. THP1-derived macrophage gating strategy and phenotype analyses upon stimulation with HKTb.	53
Figure 8. Phenotype and cytokine secretion analysis of THP1-derived macrophage upon HKTb stimulation.	55
Figure 9. Migration assay of A549 lung cancer cell line upon a period of	56
Figure 10. Analysis of A549 cell viability.	58
Figure 11. Overview of proteomics analysis approach and protein identification summary.	60
Figure 12. Overall baseline molecular function profile of untreated TEM group in comparison to the untreated M group.	63
Figure 13. Overall profile of altered cell functions upon HKTb stimulation in M and TEM model.	64
Figure 14. Common and uniquely regulated pathways in M and TEM in response to HKTb stimulation.	66

List of Attachments

Attachment 1. Flowcytometry result for macrophage phenotype study	104
Attachment 2. MTT assay of direct HKTB stimulation to A549 lung cancer cell and THP1 derived-macrophage	105
Attachment 3. Baseline profile of tumor educated macrophage vs. classically activated macrophage	105
Attachment 4. Ethical clearance from Ethical Committee, Faculty of Medicine, UGM	107
Attachment 5. Overlapping genes and proteins from mRNA and protein analysis	108
