**ABSTRAK**

Penyakit tumor banyak terjadi pada hewan kesayangan. Kasus tumor yang terjadi salah satunya adalah tumor kelenjar ludah. Tujuan penulisan tugas akhir ini untuk mengetahui pengobatan pasca operasi tumor kelenjar ludah pada anjing di *Pet Friends Animal Hospital Sri Racha, Chon Buri, Thailand*. Metode yang dilakukan adalah wawancara dengan dokter hewan dan paramedis setempat, dokumentasi, serta pengamatan di lokasi. Kasus tumor terjadi pada pasien anjing jantan bernama “Phi”, ras domestik, berumur 7 tahun, serta berat badan 22,25 kg yang didiagnosis adenokarsinoma kompleks pada kelenjar ludah. Tindakan yang dilakukan adalah operasi pengangkatan tumor. Tumor kelenjar ludah anjing “Phi” memiliki ukuran 20 x 10 cm. Tumor yang diangkat kemudian diobservasi lebih lanjut dengan biopsi jarum halus di *Vet Central Lab Bangkok, Thailand*. Perawatan intensif di *Pet Friends Animal Hospital Sri Racha, Chon Buri, Thailand* dilakukan sejak tanggal 2-10 November 2018. Terapi obat yang diberikan kepada pasien terdapat 3 jenis antiinflamasi yaitu Danzen®, Previcox®, dan Ultram®, dua antibiotik yang terdiri dari AMK® 375 mg dan Marbocyl® 80 mg, *blood booster* Ferlic-6®, dan *liver supplement* dengan merek Hepato-TAB®. Hasil terapi dengan obat-obatan tersebut pasien mengalami kesembuhan yang ditandai dengan luka pasca operasi mengering, pembengkakan mengecil, ruam kemerahan berkurang, dan nafsu makan yang stabil.
