LIST OF TABLES ..... xP
LIST OF FIGURES xii
NOTATIONS xix
ABSTRACT xxii
1. INTRODUCTION 1
1.1. Background 1
1.2. State of the Art 6
1.3. Scope of Research 9
1.4. Research Objectives 10
1.5. Benefit 10
2. LITERATURE REVIEW 11
2.1. Soil and Hydraulics Parameter in Volcanic Area 11
2.1.1. The Effect of Eruption Materials on Soil Parameter 11
2.1.2. Infiltration, Sediment Transport, and Roughness Coefficient in Steep Slope Stream 14
2.2. Historical Lahar Events 17
2.2.1. Lahar at Semeru Volcano, Indonesia 17
2.2.2. Lahar at Merapi Volcano, Indonesia 21
2.2.3. Lahar at Kelud Volcano, Indonesia 24
2.3. Threshold Criteria for Triggering Lahar 24
2.3.1. Empirical-based Lahar Prediction 24
2.3.2. Theoretical-based Lahar Prediction 28
3. THEORETICAL BACKGROUND 33
3.1. Lahar Type and Characteristics 33
3.2. Rheology of Lahar 39

UNIVERSITAS
GADJAH MADA
Development of Threshold Criteria for Rainfall-Triggered Lahar
ANI HAIRANI, Adam Pamudji Rahardjo
Universitas Gadjah Mada, 2020 | Diunduh dari http://etd.repository.ugm.ac.id/

3.3. Triggering Mechanism of Lahar 42
3.3.1. Slope Failure Criteria by Takahashi 44
3.3.2. Incipient Motion of Sediment Based on Shields Stress 48
3.3.3. Developing Lahar Initiation Criteria by Considering Hydrodynamic Forces 51
3.4. Rainfall Runoff Modelling 55
3.4.1. Hillslope Hydrology 55
3.4.2. Soil Properties 56
3.4.3. Infiltration Model 57
3.4.4. Governing Equation of Distributed Rainfall-Runoff Model 59
3.4.5. Application of Distributed Rainfall-Runoff Model 62
3.5. Rainfall Threshold Criteria 65
3.5.1. Short Term and Long Term Rainfall 65
3.5.2. Development of Critical Line 66
4. RESEARCH METHOD 73
4.1. Research Overview 73
4.2. Research Location 74
4.3. Data Collection 76
4.3.1. Topographical Map 76
4.3.2. Rainfall and Water Level Data 78
4.3.3. Secondary Data from Previous Researchers 80
4.3.4. Information on Lahar Occurrences 80
4.4. Field Investigation 81
4.5. Experiment of Initiation of Sediment Entrainment on Steep Slope Channel 90
4.6. Simulation of Distributed Rainfall-Runoff Model 92
4.6.1. Preparing Input of Topography Data 92
4.6.2. Simulation Modules 95
4.6.3. Model Verification 97
4.6.4. Identification of Lahar Initiation Area 99
4.6.5. Lahar Simulation Scenarios 102
4.7. Critical Line for Lahar Warning 103
5. RESULTS AND DISCUSSION 107
5.1. Identification of Critical Flow Depth Initiating Sediment Movement 107
5.1.1. Groundwater Profile 107

5.1.2. Incipient Motion of Bed Sediment for Different Slope Channel . 108
5.1.3. Analysis of Critical Relative Flow Depth for Different Slope Channel 113
5.2. Implementation of Distributed Rainfall-Runoff Model for Identifying Lahar Initiation Area..... 115
5.2.1. Input Parameter of the Simulation 115
5.2.2. Model Verification Based on Radar Monitoring Station 117
5.2.3. Identification of Lahar Initiation Area Based on Modified Takahashi 119
5.3. Improvement on the Development of Rainfall Threshold Criteria 126
5.3.1. Critical Line Method..... 126
5.3.2. Implementation of RBFN for Putih River Case, Merapi Volcano 128
5.3.3. Snake Line Characteristics in Putih River 130
6. CONCLUSIONS AND RECOMMENDATION..... 136
6.1. Conclusions 136
6.2. Recommendations 137
