

## **ABSTRACT**

*In the era of digitalization, media has a big contribution in constructing reality. As Luhmann thought, the media were observers who responded to social problems, one of which was the construction of New Yogyakarta International Airport (NYIA). News about the NYIA conflict, bias will be the construction of reality. This study uses the theory put forward by Niklas Luhmann, a sociologist who alludes to the science of communication, namely News and In-depth Reporting and The Construction of Reality. This study also uses the method of qualitative content analysis, which is expected to be able to explore the construction of reality carried out by the media.*
