## **ABSTRACT**

Based on the results of the literature study, there are 23 statues scattered on the eastern slope of Mount Arjuna, precisely in the Tambaksari village. These statues have the characteristics of simple workmanship and some are not depicted with foot components. Other characteristics that can be observed are having a weapon, pot belly, and wearing cloth. There are also statues with the characteristics of Hindu gods. The typology of the statues is carried out by observing the physical characteristics of the statues and conducting environmental analysis based on topographic variables and water resources. The results of this study are an explanation of the types of statues on the eastern slope of Mount Arjuna and their relationship with the surrounding environment.
