

## TABLE OF CONTENTS

	<b>Page</b>
<b>ACKNOWLEDGEMENT</b> .....	ii
<b>ABSTRACT</b> .....	iii
<b>SARI</b> .....	vi
<b>TABLE OF CONTENTS</b> .....	viii
<b>LIST OF TABLES</b> .....	xi
<b>LIST OF FIGURES</b> .....	xii
<b>SYMBOLS AND ABBREVIATIONS</b> .....	xvii
 <b>CHAPTER 1. INTRODUCTION</b> .....	 1
1.1 Background .....	1
1.2 Location of the study area .....	5
1.3 Statements of Problem .....	7
1.4 Purpose of the Study .....	12
1.5 Authenticity of the Research .....	12
1.6 Research Limitations .....	13
1.7 Research Outcomes.....	14
 <b>CHAPTER 2 LITERATURE REVIEWS AND THEORETICAL BACKGROUND</b> .....	 15
2.1 General Geology .....	15
2.1.1 Geology of the Ende Quadrangle, East Nusa Tenggara.....	15
2.1.2 Previous Studies .....	20
2.2 Historical Seismicity around Ende Area.....	22
2.3 Theoretical Background.....	27
2.3.1 Microtremors .....	27
2.3.1.1 Methods of Microtremor Measurement .....	29
2.3.1.2 H/V Ratio (QTS) Technique .....	30
2.3.2 Strong Ground Motion .....	34
(1) Amplitude .....	35
(2) Frequency .....	36
2.3.3 Estimation of Predominant Periods .....	38
2.3.4 Thickness of Sediments Calculated by the H/V Ratio of Seismic Noise .....	41
2.3.5 Vulnerability Indices of Ground and Structures and Effective Shear Strain ( $K_g$ -values) .....	43
2.3.6 Relationship between Predominant Period and Peak Ground Acceleration (PGA) .....	46
2.3.7 Identification of Ground Profile .....	47
2.3.7.1 Discrete Wavenumber Method(for incident SH wave) .....	48
2.3.7.2 Discrete Wavenumber Method(for incident P and SVwave) .....	55
2.3.8 Subsurface Geology of the Ende area inferred from microtremor data.....	59
2.3.9 Microzonation map Based on Simple Additive Weighting (SAW) Methods.....	61
2.3.10 Hypothesis .....	63
	viii

<b>CHAPTER 3 METHODOLOGY .....</b>	<b>65</b>
3.1 Desk Study .....	65
3.2 Field investigation.....	65
3.3 Data Processing.....	69
3.4 Single Microtremor accelerometer .....	70
3.5 Method of Study .....	72
 <b>CHAPTER 4 RESULTS AND DISCUSSIONS .....</b>	 <b>74</b>
4.1 Geology of Ende Area.....	74
4.2 Seismic Response Analysis.....	81
4.2.1 Predominant frequency of research results in Ende area .....	81
4.2.2 Amplification of research results in Ende area .....	86
4.2.3 Peak Ground Acceleration of research results in Ende area (PGA) .	88
4.2.4 Seismic vulnerability index value of research results in Ende area...	94
4.2.5 Shear Strain of research results in Ende area ( $\gamma$ ) .....	96
4.2.6 Identification of Ground Profile.....	100
(a) SH wave analysis .....	100
(b) P-Sv wave analysis .....	103
(c) Estimation ground profile using Microtremor and Discrete Wavenumber Method.....	104
4.2.7 Distribution of sediment thickness .....	119
4.2.8 Modeling three-dimensional subsurface structure .....	121
4.2.9 Bedrock Morphology .....	122
4.2.10 Estimation Fault Orientation and Subsurface Geology of the Ende area .....	124
4.2.11 Identification Soil type comparing geological lithology of rock with predominant period from HVSR.....	127
4.3 Seismicity Microzonation map Based on Simple Additive Weighting (SAW) Method .....	135
 <b>CHAPTER 5 CONCLUSION AND SUGGESTIONS.....</b>	 <b>141</b>
5.1 Conclusion .....	141
5.2 Suggestions .....	144
 <b>REFERENCES.....</b>	 <b>146</b>
<b>APPENDICES .....</b>	<b>150</b>
<b>APPENDIX (A) STRATIGRAPHIC COLUMN OF THE OUTCROPS AT THE STUDY AREA .....</b>	<b>151</b>
<b>APPENDIX (B) SPECIFICATIONS AND CHARACTERIZATION OF GPL-6A3P OF MICROTREMOR DEVICE .....</b>	<b>160</b>
<b>APPENDIX (C) STEPS OF PROCESSING AND ANALYSIS OF THE SINGLE MICROTREMORS DATA .....</b>	<b>165</b>
<b>APPENDIX (D) THE RESULTS OF THE H/V SPECTRAL RATIO [HVSR] AND THE CALCULATED RESULTS DERIVED FROM HVSR OF SINGLE MICROTREMOR OBSERVATIONS IN ENDE AREA, EAST NUSA TENGGARA .....</b>	<b>176</b>

<b>APPENDIX (E) STEPS OF PROCESSING AND ANALYSIS OF DISCRETE WAVENUMBER METHOD .....</b>	<b>199</b>
<b>APPENDIX (F) SEDIMENT THICKNESS [m] .....</b>	<b>210</b>

## LIST OF TABLES

		<b>Page</b>
Table 1.1	Destructive earthquakes and earthquake-tsunami in the last 37 years in the Indonesian region ( <a href="http://earthquake.usgs.gov/earthquakes/eqarchive/s/year/byyear.php">http://earthquake.usgs.gov/earthquakes/eqarchive/s/year/byyear.php</a> )	----- 5
Table 2.1	The relationship of soil types and predominant periods (Okada, 1971)	----- 40
Table 2.2	Strain Dependence of Dynamic Properties of Soil (Nakamura, 1997)	----- 44
Table 4.2.1	Shear wave velocity of soil layer from SH and SV by DWM method for each profile	----- 117
Table 4.2.2	Comparison between Geological lithology and predominant periods	----- 134
Table 4.3.1	Weights, alternative and rank before normalization for total result	----- 137

## LIST OF FIGURES

		<b>Page</b>
Figure 1.1	Tectonic map of Eastern Indonesia, which shows the tectonic setting of the Flores Island	----- 3
Figure 1.2	Major tectonic features in the eastern Sunda arc	----- 4
Figure 1.3	Location map of the Ende area, East Nusa Tenggara, Indonesia	----- 6
Figure 1.4	Topography of the study area	----- 8
Figure 1.5	Seismic Intensity Map of East Nusa Tenggara in 1992 earthquake (Irsyam, 2007)	----- 9
Figure 1.6	Location of the Iya volcano at the southern part of the study area	----- 11
Figure 1.7	Illustration of population in the study area	----- 11
Figure 2.1	Geology map of the study area	----- 19
Figure 2.2	Amplification map of rock/soil in Ende city (Saputra, et al., 2010)	----- 21
Figure 2.3	Predominant period map of rock/soil in Ende city (Saputra, et al., 2010)	----- 21
Figure 2.4	Historical Seismicity in Nusa Tenggara Timur, Mw>4.0 (1840-2014)	----- 23
Figure 2.5	Tectonic and earthquake epicenter map of the eastern Sunda arc	----- 23
Figure 2.6	Damage map due to On December 12th, 1992 Flores earthquake in Ende area	----- 26
Figure 2.7	Effect of artificial noise on short period microtremors (Nakamura, 1989)	----- 28
Figure 2.8	Effect of oceanic swell on long period microtremors (Yamanaka, et al., 1993)	----- 29
Figure 2.9	Determination of spectral amplification factor and the predominant soil period from H/V ratios. (Galerce, 1991)	----- 31
Figure 2.10	A sample geological setting to illustrate the soil amplification and elimination of source effects in H/V spectra (Galerce, 1991)	----- 33
Figure 2.11	The typical shape of the H/V spectral ratio (Nakamura, 2008)	----- 34
Figure 2.12	Two hypothetical Fourier amplitude spectra with same predominant period, but very different frequency content (Kramer, 1996)	----- 36
Figure 2.13	Raw and smooth Fourier amplitude spectra (a) rock (b) soil (Kramer, 1996).	----- 37
Figure 2.14	Process of Fourier series representing the	

	complicated loading can allow relatively simple solutions for harmonic loading to be used to produce total response (Kramer, 1996).	-----	38
Figure 2.15	Spectra of long-period microtremors observed at Hachinohe and estimated spectral peak period ((Naruse et al., 1976)	-----	39
Figure 2.16	Relation of predominant period to underground structures in Hachinohe (after Ohta, 1978)	-----	40
Figure 2.17	Microtremor characteristics with respect to site conditions (Ishiyama, 1982)	-----	41
Figure 2.18	Basic principle of site response, transfer function (Ibs-von Seht and Wohlenberg, 1999)	-----	42
Figure 2.19	Shear deformation of surface ground (Nakamura, 1997)	-----	45
Figure 2.20	$K_g$ -values derived from QTS of Microtremor in S.F. (Nakamura, 1997)	-----	46
Figure 2.21	Schematic cross section displaying the layered-medium configuration and coordinate axes(Aki, K. L. Larner ,1970)	-----	50
Figure 2.22	Schematic illustration of the region near the interface displaying causes of the Rayleigh ansatz error. (Aki, K. L. Larner ,1970)	-----	52
Figure 2.23	sketch model of the subsurface geology of two layers and spectral response (Marjiyono, et al., 2014)	-----	61
Figure 2.24	Flow diagram SAW method	-----	64
Figure 3.1	location of the outcrops in the study area	-----	66
Figure 3.2	location of the geological outcrop-1 in the study area	-----	67
Figure 3.3	Location map of microtremor single station sites in Ende area.	-----	68
Figure 3.4	Single microtremor measurement at observation site (39)	-----	69
Figure 3.5	Flow chart of modeling the shallow subsurface structure	-----	71
Figure 3.6 (a)	Instrument of GPL 6A-3P of serial No. 0418707 (Mitsutoyo), external view		
(b)	Instrument of GPL 6A-3P of serial No. 0418707 (Mitsutoyo), internal view	-----	72
Figure 3.7	Flow chart of research in general	-----	73
Figure 4.1.1	Breccia interbedded with volcanic breccia in the Ndao village (outcrop – 1) and sandy tuff overlay on the conglomerate tuff at Potu village (outcrop –	-----	75

2).

Figure 4.1.2	Sandy gravel at Kuzazo village (outcrop-3) and iron sand at Kuzazo village (outcrop – 4)	-----	76
Figure 4.1.3	Sand at Mautapaga village (outcrop-5) and river deposit at Nanga Nasa (outcrop – 6)	-----	76
Figure 4.1.4	Gravelly sand at Paupanda Atas village (outcrop-7) and volcanic clastic at Waniwona village (outcrop – 8)	-----	77
Figure 4.1.5	Shaded relief model from SRTM elevation ( <a href="http://earthexplorer.usgs.gov/">http://earthexplorer.usgs.gov/</a> )	-----	79
Figure 4.1.6	Geological map of the study area	-----	80
Figure 4.2.1	(a) a single clear peak, (b) almost flat spectral ratio and (c) without clear peaks.	-----	83
Figure 4.2.2	Predominant Frequency Map of Ende	-----	84
Figure 4.2.3	The frequent occurrence of predominant frequency (Hz) values at the study area.	-----	85
Figure 4.2.4	Amplitude of H/V map of Ende area.	-----	87
Figure 4.2.5	The frequent occurrence of amplitude of H/V values at the study area.	-----	88
Figure 4.2.6	Peak Ground Acceleration in Soil Layer Map of Ende area	-----	90
Figure 4.2.7	Seismic zonation in Indonesia (SNI-1726-2010)	-----	92
Figure 4.2.8	Seismic zonation in Indonesia (SNI- 1726-2012)	-----	93
Figure 4.2.9	Seismic Vulnerability Index map of Ende area	-----	95
Figure 4.2.10	Peak Ground Acceleration in bedrock Map of Ende area	-----	98
Figure 4.2.11	Shear Strain map of Ende area	-----	99
Figure 4.2.12	Magnification factors of some frequency for different incident wave angles ( $\theta=0^\circ, 30^\circ, 45^\circ$ & $60^\circ$ ) obtained by the discrete wave number method	-----	101
Figure 4.2.13	Magnification factors of some frequency at depth 50m and 200m for SH wave input obtained by the discrete wave number method	-----	102
Figure 4.2.14	Frequency response for P-Sv wave input	-----	104
Figure 4.2.15	Four profile map in Ende area	-----	106
Figure 4.2.16	An example simple ground model for two layer media with Observation Points	-----	107
Figure 4.2.17	Response Function of SH input for profile (1) obtained by DWM	-----	108

Figure 4.2.18	Response Function of SV input for profile (1) obtained by DWM	-----	109
Figure 4.2.19	H/V ratio of microtremor data for profile (1)	-----	110
Figure 4.2.20	An example of comparison the value of Frequency from SH and SV by DWM method and HVSR for observation site (18)	-----	110
Figure 4.2.21	Identified ground profile (1) from SH and SV obtained by DWM method	-----	111
Figure 4.2.22	Response Function of SH input for profile (2) obtained by DWM	-----	111
Figure 4.2.23	Response Function of SV input for profile (2) obtained by DWM	-----	112
Figure 4.2.24	H/V ratio of microtremor data for profile (2)	-----	112
Figure 4.2.25	Identified ground profile (2) from SH and SV obtained by DWM method	-----	113
Figure 4.2.26	Response Function of SH input for profile (3) obtained by DWM	-----	113
Figure 4.2.27	Response Function of SV input for profile (3) obtained by DWM	-----	114
Figure 4.2.28	H/V ratio of microtremor data for profile (3)	-----	114
Figure 4.2.29	Identified ground profile (3) from SH and SV obtained by DWM method	-----	115
Figure 4.2.30	Response Function of SH input for profile (4) obtained by DWM	-----	115
Figure 4.2.31	Response Function of SV input for profile (4) obtained by DWM	-----	116
Figure 4.2.32	H/V ratio of microtremor data for profile (4)	-----	116
Figure 4.2.33	Identified ground profile (4) from SH and SV obtained by DWM method	-----	117
Figure 4.2.34	Sediment thickness map of Ende area.	-----	120
Figure 4.2.35	Distribution of Sediment thickness(m) at the study area	-----	121
Figure 4.2.36	Three-dimensional shape of the soil layer of the estimated subsurface structure in the study area	-----	122
Figure 4.2.37	Bedrock height map	-----	123
Figure 4.2.38	Three-dimensional shape of the bedrock in the study area	-----	123
Figure 4.2.39	Location of the HVSR spectrum cross-section in Ende area	-----	124
Figure 4.2.40	HVSR spectrum cross-section 1 and 2	-----	125

Figure 4.2.41	(a) Location of conglomerate tuff outcrop at Potu village in the northern part of the study area		
	(a) Predominant soil period amplitude from H/V ratios in observation site (80)	-----	127
Figure 4.2.42	(a) Location of sandy gravel outcrop at Kuzazo village in the study area		
	(b) Predominant soil period amplitude from H/V ratios in observation site (77)	-----	128
Figure 4.2.43	(a) Location of iron sand outcrop at Kuzazo village (western seashore) in the study area		
	(b) Predominant soil period amplitude from H/V ratios in observation site (76)	-----	129
Figure 4.2.44	(a) Location of sand outcrop at Mautapaga village in the eastern part in the study area		
	(b) Predominant soil period amplitude from H/V ratios in observation site (57)	-----	130
Figure 4.2.45	(a) Location of river deposits outcrop at Nanga Nasa in the study area		
	(b) Predominant soil period amplitude from H/V ratios in observation site (154)	-----	131
Figure 4.2.46	a) Location of gravelly sand outcrop at Paupanda Atas village in the middle part in the study area		
	(b) Predominant soil period amplitude from H/V ratios in observation site (19)	-----	132
Figure 4.2.47	(a) Location of volcanic clastic outcrop at Waniwona village at the base of Maja Mountain that is located beside of Iya volcano in the study area		
	(b) Predominant soil period amplitude from H/V ratios in observation site (37)	-----	133
Figure 4.3.1	Seismicity microzonation map	-----	138
Figure 4.3.2	Seismicity microzonation map comparing with damage area in 1992 earthquake	-----	139
