Abstract	viii
Intisari	ix
Table of Contents	x
List of Figures	xii
List of Tables	xiv
List of Acronyms	xv
I. INTRODUCTION	1
I.1. Background.....	1
I.2. Problems Statement	4
I.3. Research Objectives.....	5
I.4. Research Questions.....	5
I.5. Expected Outputs.....	5
I.6. Literature Review	6
I.7. Theoretical background	11
I.7.1. Structure from Motion	11
I.7.2. Online Web Service Framework.....	32
II. METHODS AND IMPLEMENTATION	45
II.1. Method of research.....	45
II.1.1. Research Materials	45
II.1.2. Research Tools	46
II.2. Implementation of Method	49
II.2.1. Dataset Acquisition and Preparation	52
II.2.2. Web Framework Programming	57
II.2.3. Installation of SfM libraries.....	77
II.2.4. SfM Pipeline Programming and Processing.....	80
II.2.5. Application Deployment	87
II.2.6. Evaluation of CloudSfM 3D Models.....	89
III. RESULT AND DISCUSSION	93
III.1. Result	93

III.1.1. SfM Pipeline Using Open Source Libraries	93
III.1.2. The CloudSfM Webservice	97
III.1.3. Evaluation of SfM reconstruction	104
III.2. Discussion	113
IV. CONCLUSIONS AND SUGGESTIONS	116
IV.1. Results	116
IV.2. Suggestions	117
V. REFERENCES	118
VI. APPENDIX	124
VI.1. CloudSfM Source Code	124
VI.2. SfM_GlobalPipeline.py	134
VI.3. OpenMVG Install Script (openmvg_install.sh)	138
VI.4. Report of SfM Reconstruction	141
VI.5. Sample Terminal Output of a CloudSfM project	162

LIST OF FIGURES

Figure I-1: Screenshots of some SfM webservices: CMP SfM Webservice (a) and Microsoft's Photosynth (b)	8
Figure I-2: Screenshots from Autodesk 123D Catch Reconstruction.....	9
Figure I-3: Methods of 3D Acquisition using Non-Contact Waves (Remondino and El-Hakim, 2006)	13
Figure I-4: A typical setup of SfM scene (from (Westoby et al., 2012)).....	14
Figure I-5: Above: Keypoints and keypoints descriptor. Below: Keypoints matching using SIFT algorithm (from Brahmabhatt (2013))	15
Figure I-6: Geometry of a pinhole camera (Hartley and Zisserman, 2003)	16
Figure I-7: Epipolar Geometry (Jebara et al., 1999),.....	20
Figure I-8: Typical scene of Structure from Motion problem (Thormählen et al., 2010).....	21
Figure I-9: A typical Structure from Motion pipeline	24
Figure I-10: Some deliverables from a SfM pipeline	27
Figure I-11: An example of Visibility Graph and Pairwise Matrix (from (Moussa, 2014)).....	30
Figure I-12: Cloud-to-cloud comparison using ICP on CloudCompare (Thoenen et al., 2014).....	32
Figure I-13: Applications of Cloud Computing (Chandrasekaran, 2014)	34
Figure I-14: End-to-end Javascript solution for SPA	36
Figure I-15: Architecture of MVC Communications (Haviv, 2014).....	37
Figure I-16: MEAN framework, Combinations of logos from its components (Bretz and Ihrig, 2014).....	38
Figure I-17: Comparison between LAMP and MEAN Architecture.....	40
Figure I-18: Local, Centralized and Distributed VCS (Chacon, 2009)	43
Figure I-19: A Github repository of QGIS (https://github.com/qgis/).....	44
Figure II-1: General Flowchart of Thesis Development.....	52
Figure II-2: Excerpt from Naga Dataset	54
Figure II-3: Excerpt from Tree Dataset	54
Figure II-4: Excerpt from UGM Dataset	55
Figure II-5: Diagrams of data acquisition at UGM Central Office Building.....	55
Figure II-6: Flowchart of CloudSfM Architectural Design	58
Figure II-7: The Yeoman Workflow (http://yeoman.io).....	61
Figure II-8: Scaffoldings of CloudSfM web application	62
Figure II-9: Implementation of MVC framework for image uploading in CloudSfM.....	65
Figure II-10: Flowchart of Manage Project Route.....	72
Figure II-11: Structure of Server-side SfM Processing Libraries.....	77
Figure II-12: Parameters of OpenMVG_main_ImageListing	81
Figure II-13: Samsung Galaxy Grand 2 Camera Specification	82
Figure II-14: Parameters of OpenMVG_main_ComputeFeatures.....	83
Figure II-15: Parameters of OpenMVG_main_ComputeMatches.....	84
Figure II-16: Grunt serve command running in Linux Terminal.....	88
Figure II-17: Registration of Naga model to reference data	89

Figure II-18: Iterative Closest Point Algorithm in CloudCompare	90
Figure II-19: Registered model and reference point cloud	91
Figure II-20: Registration of point cloud to ground truth data	92
Figure II-21: Pick point for ground truth evaluation	92
Figure III-1: Diagram of SfM Pipeline Constructed Using Python Script	95
Figure III-2: CloudSfM Running SfM Pipeline in the Background	96
Figure III-3: Content of zip file Containing 3D textured model from served in CloudSfM.....	97
Figure III-4: Github Repository of CloudSfM.....	98
Figure III-5: CloudSfM Landing page.....	99
Figure III-6: Authorization page: register and login page	100
Figure III-7: Dashboard, or main menu of CloudSfM.....	100
Figure III-8: User Interface to create a new project.....	101
Figure III-9: Customized SfM settings in CloudSfM	102
Figure III-10: Options to review images before uploading	102
Figure III-11: Project Manager	103
Figure III-12: Final 3D Models of the datasets obtained from CloudSfM Projects ..	105
Figure III-13: Residuals histogram of the three datasets	107
Figure III-14: Camera Pose Graph of Naga Dataset.....	108
Figure III-15: Camera Pose Graph of Tree Dataset	109
Figure III-16: Camera Pose Graph of UGM Building Dataset	109
Figure III-17: Cloud-to-cloud evaluation on Naga Dataset	110
Figure III-18: Cloud-to-cloud evaluation on Tree Dataset	111
Figure III-19: Possible error due to inaccuracies of the 3D models in point #19 and #21	114

LIST OF TABLES

Table I-1: Overview of SfM software.....	10
Table II-1: Datasets and their respective testing purpose	46
Table II-2: Technical Specification of Samsung Galaxy Grand 2 Duos (www.samsung.com)	47
Table II-3: Measured sample points in UGM dataset obtained using TS*	56
Table II-4: Description of server Request-Response in CloudSfM.....	74
Table III-1: RMS Error of Global SfM reconstruction on each dataset	106
Table III-2: Result of Cloud-to-Cloud Comparison	112
Table III-3: Ground Truth Evaluation (units are meter, scaled, not georeferenced)	112
