ABSTRACT	xxiii
INTISARI	xxiv
I. INTRODUCTION.....	1
A. Background.....	1
B. Problem Statement.....	3
C. The Scope and Limitation of Research.....	5
1. The scope of research.....	5
2. The limitation of research.....	5
D. Novelty.....	6
E. Research Objective.....	7
F. Benefit.....	8
II. LITERATURE REVIEW.....	9
A. The Anatomy of Bamboo Culm.....	9
B. Effect of Sclerenchymatous Fiber on Bamboo Properties.....	11
C. Mechanical Properties of Bamboo Culm.....	13
D. Glulam Bamboo.....	24
1. Beam.....	24
a. Beam fail in bending.....	24
b. Beam fail in shear.....	27
2. Column.....	29
E. Analytical Study on The Nonlinear Behavior of Structural Element...	33
III. THEORITICAL BACKGROUND.....	48

A. Theory of Beam-Columns.....	48
1. Pure bending of rectangular section.....	48
2. Axial thrust effect on bending.....	49
3. Derivation of basic equations of beam-columns.....	50
a. Statics.....	50
b. Kinematics.....	52
c. Governing equation of elastic beam-column.....	52
d. Governing equation of plastic beam-column.....	53
4. General solution of elastic beam-column (deflection problem).....	54
5. Elastic limit state analysis.....	55
6. Deflection method for plastic beam-columns.....	57
B. Material Types.....	59
1. Linear and non linear material.....	59
2. Homogenous and non homogenous material.....	60
C. Linear and Non Linear Analysis.....	60
D. Numerical Methods.....	60
1. Natural coordinates.....	60
2. Numerical integration.....	63
3. Finite differences.....	63
4. Newton-Raphson method.....	67
E. Analysis for Obtaining Equilibrium Deflection of Glulam Bamboo Beam-Column.....	69
F. Design of Members Subjected to Simultaneously Bending and Compressive Loading.....	71
G. Hypothesis.....	73
IV. RESEARCH METHOD.....	74
A. Introduction.....	74
B. Experimental Study.....	76
1. Compression test parallel to grain.....	76
a. Specimen.....	76
b. Specimen preparation.....	77

c. Compression test.....	79
2. Tension test parallel to grain.....	79
a. Specimen.....	79
b. Specimen preparation.....	82
c. Tension test.....	83
3. Static bending.....	84
a. Specimen.....	84
b. Specimen preparation.....	85
c. Bending test.....	86
4. Full scale beam-column test.....	86
a. Specimen.....	86
b. Specimen preparation.....	87
c. Instrumentation.....	87
d. Test procedure.....	90
C. Numerical Study.....	91
1. Assumption.....	91
2. Numerical solution formulation assuming bamboo as a non linear and homogenous material.....	91
a. Glulam bamboo beam-column model.....	91
b. Formulation.....	93
c. Application of Gauss quadrature.....	97
3. Numerical solution formulation assuming bamboo as a non linear and non homogenous material.....	98
a. Glulam bamboo beam-column model.....	98
b. Formulation.....	98
c. Application of Gauss quadrature.....	102
4. Neutral axis iteration.....	103
5. Deflection iteration.....	105
6. Computational procedure.....	107
V. RESULT AND DISCUSSION.....	112
A. Experimental Study.....	112

1. Compression parallel to grain test result.....	112
a. Glulam bamboo made of the outer side of bamboo split.....	112
b. Glulam bamboo made of the inner side of bamboo split.....	114
c. Glulam bamboo made of the whole side of bamboo split.....	116
d. The comparison of compression properties of glulam bamboo made of outer, inner and the whole side of bamboo split.....	118
2. Tension parallel to grain test result.....	120
a. Specimen made of the outer side of bamboo split without node.....	120
b. Specimen made of the outer side of bamboo split with node.....	122
c. Specimen made of the inner side of bamboo split without node.....	123
d. Specimen made of the inner side of bamboo split with node.....	125
e. The comparison of the tension properties of glulam bamboo made of outer and inner side of bamboo split without and with node.....	126
3. Static bending test result.....	130
a. Glulam bamboo of which node was randomly located along the beam length.....	130
b. Glulam bamboo of which node was located in the middle of the beam length.....	134
c. Glulam bamboo of which node is located near the beam ends.....	136
d. The effect of node position due to bending properties of glulam bamboo beam.....	137
4. Full scale beam-column test result.....	140
B. Numerical Study.....	143
1. Determination of constitutive model.....	143
a. Constitutive model of glulam bamboo as a homogenous material....	144
b. Constitutive model of glulam bamboo as a non homogenous material.....	148
c. Comparison between constitutive model of glulam bamboo as a homogenous and non homogenous material.....	156
2. Numerical analysis.....	158
a. Assuming bamboo as a non linear and homogenous material, tensile stress-strain relation derived from tensile test without node...	160
b. Assuming bamboo as a non linear and homogenous material, tensile stress-strain relation derived from tensile test with node.....	163

c. Assuming bamboo as a non linear and non homogenous material, tensile stress-strain relation derived from tensile test without node...	166
d. Assuming bamboo as non linear and non homogenous material, tensile stress-strain relation derived from tensile test with node.....	170
C. Validation.....	173
1. Validation of the load-deflection curve.....	173
2. Validation of the ultimate lateral load.....	179
3. Validation of strain and stress.....	182
D. Comparison between The Analysis Result that Calculated by Using Formulated Numerical Analysis and The Analysis Result that Calculated by Assuming Bamboo as a Linear and Homogenous Material.....	190
1. Calculation the ultimate lateral load.....	191
a. Data.....	191
b. The calculation of allowable maximum moment M'_x	191
c. The calculation of column stability factor C_p	191
d. The calculation of allowable maximum axial load P'	192
e. The calculation of maximum moment about x - x axis M_x	192
f. The calculation of ultimate lateral load P_y	192
2. Calculation the deflection at the middle of the beam.....	192
a. Data.....	193
b. The calculation of k constant.....	194
c. The calculation of integration constants.....	194
d. The calculation of deflection.....	194
3. The comparison among the calculation result assuming bamboo as a linear and homogenous material, numerical analysis result assuming bamboo as a non-linear and homogenous/non-homogenous material and an experimental result.....	195
E. Application.....	201
VI. CONCLUSION AND RECOMMENDATION.....	203
A. Conclusion.....	203
B. Recommendation.....	204
REFERENCES.....	206
