PENGESAHAN	ii
PERNYATAAN	iii
NASKAH SOAL TUGAS AKHIR	iv
Acknowledgment	vi
Table of Content	vii
Figure List	x
Table List	xiii
Appendix List	xiv
Nomenclature	xv
Abstract	xvi
Intisari	xvii
Chapter One: Introduction	1
1.1 Background	1
1.2. Problem Formulation	2
1.3. Limitations of the study	2
1.4. Objectives	3
1.5. Benefits	3
Chapter Two: Literature Review	4
2.1 Total Hip Joint Arthroplasty	4
2.2 Evolution of Total Hip Arthroplasty	5
2.3. Methods for Researching the Hip Joint Prosthesis	8
2.3.1. Experiment	8
2.3.1.1. Static test	8
2.3.1.2. Dynamic Test	9
2.3.2. Simulation	10
Chapter Three: Theoretical Background	12
3.1 Femur	12
3.2 Hip Joint Connection and Load Distribution	14
3.3 Hip Joint prosthesis	16
3.4 Material Selection for Total Hip Arthroplasty	18
3.4.1 Titanium Grade 2	20
3.4.2 Stainless Steel 316 L	20
3.4.3 UHMWPE	21

3.5 ABAQUS® CAE 6.11	22
3.5.1 Description	21
3.5.1.1 Pre Processing or modeling	21
3.5.1.2 Processing or finite element analysis	22
3.5.1.3 Post Processing or obtaining information	22
3.5.2 Part Module	22
3.5.2.1 Properties	22
3.5.2.2 Assembly	23
3.5.2.3 Step	23
3.5.2.4 Interaction	23
3.5.2.5 Load	23
3.5.2.6 Mesh	24
3.5.2.7 Job	24
Chapter Four: Material and Method	26
4.1. Experimental Method	26
4.1.1. Load Selection for the testing	26
4.1.2. Compression Test	28
4.1.2.1 Fixation components	28
4.1.2.1.1 Base fixture	28
4.1.2.1.2 Prosthesis box	28
4.1.2.1.3 Punch	29
4.1.2.2 Steps of the Experiment	29
4.1.2.2.1 Assemble the Specimen	29
4.1.2.2.2 Preparing the Specimen	29
4.1.2.2.3 Preparing the Fixation	29
4.1.2.2.4 Setting the Adduction Degree	29
4.1.2.2.5 Starting the Machine	30
4.1.2.2.6 Preparing the Punch	30
4.1.2.2.7 Assign the Specimen to Conduct the Experiment	30
4.1.2.2.8 Grip the Fixation-Prosthesis Assembly	30
4.1.2.2.9 Compressing the Prosthesis	30
4.1.2.2.6.10 Acquiring Data and Making the Graph	31
4.2 Simulation Method	31
4.2.1. Loading Selection	31
4.2.2 Simulation using ABAQUS® CAE	33
4.2.2.1 Acetabular Cup	34
4.2.2.2 Femoral Ball	34
4.2.2.3 Femoral Stem	35
4.2.2.4 Prosthesis Aluminum Box	36
4.2.2.5 Degree Plate	36
4.2.2.6 Shaft	36
4.2.3 Steps of Simulation	36

4.2.3.1 Import the Needed Components from Autodesk Inventor 2015	36
4.2.3.2 Meshing the Parts	37
4.2.3.3 Inputting the Properties of Material	38
4.2.3.4 Assigning Sections	38
4.2.3.5 Creating the Step	39
4.2.3.6 Creating an Assembly	39
4.2.3.7 Creating the Interactions	39
4.2.3.8 Set the Boundary Conditions	40
4.2.3.9 Creating the Job	40
4.2.3.10 Results of the Simulation	40
4.3. Flowchart Diagram	41
Chapter Five: Result	42
5.1 Experiment apparatus	42
5.1.1 Punch	42
5.1.1.1 Acetabular cup socket	43
5.1.1.2 Stainless steel shaft	43
5.1.2 Fixation	45
5.1.2.1 Fixation body	45
5.1.2.2 Fixation base	46
5.1.2.3 Fixation shaft	47
5.1.2.4 Bolts and nuts	47
5.1.3 Prosthesis and Box assembly	48
5.1.3.1 Left box	49
5.1.3.2 Right Box	49
5.1.4 Manufactured Parts	50
5.2 Experimental Result	52
5.3 Simulation Results	56
5.3. Comparing the graph of simulation and experiment	61
Chapter Six: Conclusion	65
6.1. Conclusions	65
6.2. Suggestions	65
References	67
Appendix	70
