HALAMAN PENGESAHAN.....	ii
PREFACE	iii
CONTENT	vi
LIST OF TABLES	x
LIST OF FIGURES	xi
LIST OF ABBREVIATION	xiii
ABSTRACT.....	xiv
<i>Intisari</i>	xv
CHAPTER 1 INTRODUCTION	1
1.1 Background	1
1.2 Problem Statements	4
1.3 Problem Limitations	5
1.4 Research Objectives	5
1.5 Thesis Organization.....	6
CHAPTER 2 GAME THEORETICAL APPROACH FOR WIRELESS COGNITIVE RADIO NETWORK	7
2.1 Wireless Network System	7

2.2.1	Wireless Ad-hoc Network Topology	7
2.2.2	Free Space Propagation Model	9
2.2.3	Throughput Calculation	9
2.2	Cognitive Radio Framework	10
2.3	Learning and Decision Making Mechanism	12
2.3.1	Game Theoretical Framework	12
2.3.2	Non-cooperative Games and Nash Equilibrium	15
2.3.3	Strategy Decision Scheme.....	18
2.3.4	Potential Game and Best Response Dynamics	19
CHAPTER 3 RESEARCH METHOD		21
3.1	Channel Allocation and Interference Management.....	21
3.1.1	Interference Model	21
3.1.2	Utility Function	22
3.1.3	Potential Game Formulation for Channel Allocation	24
3.2	System Model.....	24
3.3	Adaptive Channel Scenario	27
3.4	Potential Game Algorithm Design	29
3.4.1	Variable Declaration	29
3.4.2	Initialization	29

3.4.3	Main Algorithm.....	32
3.5	Interactive Design Algorithm	35
3.5.1	Initialization Process	35
3.5.2	Object Drawing and Coloring	35
3.5	Simulation Setup	41
3.6.1	Software	41
3.6.2	Simulation Model and Parameters	42
CHAPTER 4 RESULT AND ANALYSIS		44
4.1	Simulation Results.....	44
4.1.1	Network Setup.....	44
4.1.2	Potential Game Calculation.....	47
4.1.3	Interactive Design	49
4.2	Performance Analysis.....	51
4.2.1	Nash Equilibrium Convergence	51
4.2.2	Channel Convergence Properties	53
4.2.3	Average Network Throughput	55
4.2.4	Average User Throughput.....	56
4.2.5	Cumulative Distribution Function (CDF)	56
4.2.6	SINR.....	58
CHAPTER 5 CONCLUSION AND FUTURE WORK		61

5.1	Conclusion.....	61
5.2	Future Work	62
	REFERENCES.....	63
	APPENDIX	66
