INTISARI

Anjing merupakan salah satu hewan kesayangan yang banyak digemari oleh masyarakat saat ini, sehingga pengetahuan tentang morfologi anjing merupakan hal yang wajib bagi pemiliknya. Tujuan dari penulisan tugas akhir ini adalah untuk mengetahui jenis-jenis anjing dan ciri fisik anjing *pedigree* atau *non-pedigree* di Laboratorium Klinik “Klinik Hewan Jogja” dan Unit K-9 Bandara Adi Soemarmo Solo. Pencatatan klinis pasien didapat dari kartu ambulatori Laboratorium Klinik “Klinik Hewan Jogja” yang meliputi nama anjing dan pemilik, berat badan, umur anjing, jenis kelamin, bangsa dan silsilah, pulsus, frekuensi nafas, dan temperature. Setiap anjing diamati warna rambut, moncong, telinga dan warna mata. Panjang tubuh, tinggi tubuh, panjang ekor dan ukuran kepala setiap anjing diukur dengan menggunakan pita ukur. Pencatatan data anjing Unit K-9 juga dilakukan metode pengukuran dan pengamatan, sedangkan untuk menambah kelengkapan diperoleh dengan metode wawancara dengan pihak K-9 mengenai tugas masing-masing anjing K-9 serta sertifikat yang ada.

Hasil pengamatan menunjukkan rata-rata anjing memiliki ciri fisik ras asli yang baik. Bentuk tengkorak kepala *dolichacephalic* dimiliki oleh anjing Collie dan Poodle, *broad skull* dimiliki anjing Golden retriever dan Labrador, *flat skull* dimiliki anjing Rottweiler dan Doberman. Bentuk hidung *winter nose* dimiliki anjing Golden retriever, Rottweiler, Labrador, Doberman dan German Shepherd. Bentuk mata *wall eyes* dimiliki anjing Collie dan Golden retriever, *almond eyes* dimiliki anjing Shih tzu dan Poodle.
