

TABLE OF CONTENTS

DECLARATION	i
ABSTRACT	ii
ACKNOWLEDGEMENTS	iv
LIST OF ACRONYM	xxv
CHAPTER ONE.....	1
INTRODUCTION.....	1
1.1 Background	1
1.2 Knowledge gap.....	7
1.3 Research problem	13
1.4 Research objectives	14
1.4.1 Main objective.....	14
1.4.2 Specific objectives.....	14
1.5 Research questions	16
1.6 Originality of the research.....	17
1.7 Significance of the study	17
1.8 New contribution of the research	18
1.9 Scope of the research.....	19
CHAPTER TWO.....	22
LITERATURE REVIEW	22
2.1 Overview	22
2.2 Understanding flood hazard	22
2.3 Types of floods.....	23

2.3.1 Local Floods.....	24
2.3.2 Riverine Floods	25
2.3.3 Coastal Floods	26
2.3.4 Flash Floods	27
2.3.5 Flooding in Indonesia and Tanzania	29
2.4 Impacts of floods.....	34
2.4.1 Physical impact of floods	34
2.4.2 Human-social impact of floods.	35
2.4.3 Economic impact of floods.....	36
2.4.4 Environmental impact of flood.....	37
2.5 Flood control measures	39
2.5.1 Structural strategies	39
2.5.2 Non-structural strategies.....	40
2.6 Approaches to flood risk management.....	40
2.6.1 Traditional approach to flood management.....	40
2.6.1.1 Critique of the traditional approach to flood management.....	41
2.6.2 Integrated flood management approach (Modern approach to flood management)..	43
2.6.2.1 Critique of the integrated flood management.....	45
2.7 Theoretical and conceptual framework	48
2.7.1 Protection motivation theory	49
2.7.1.1 Threat-Appraisal Process	51
2.7.1.2 Coping appraisal.....	52
2.7.2 Collaborative planning theory	54

2.8 Conceptual framework	59
2.8.1 Conceptualizing flood hazard key information elements	59
2.8.2 Conceptualizing technical suitability of adaptation strategies to flooding.....	63
2.8.2.1 Clarification of variables	65
2.9 Clarification of key concepts.....	70
2.9.1 Hazard	71
2.9.2 Vulnerability.....	72
2.9.3 Risks	72
2.9.4 Disasters	73
2.9.5 Adaptation strategies	74
2.9.6 Resilience	75
2.9.7 River	76
2.9.8 Informal settlements	77
2.9.9 Technical suitability	78
CHAPTER THREE	79
RESEARCH METHODOLOGY.....	79
3.1 Overview	79
3.2 Research strategy and design	79
3.2.1 Selection of a case study area.....	85
3.2.1.1 Criteria for selecting case for in-depth study in Dar es Salaam	86
3.2.1.2 Criteria for selecting case for in-depth study in Surakarta	89
3.2.3 Sample size selection.....	91
3.3 Data collection methods	94

3.3.1 Methods for documenting causes, adaptation strategies and mapping of floods zones	94
3.3.2 Methods for examining technical suitability of adaptation strategies	97
3.4 Clarification of data collection tools	100
3.4.1 Literature review	100
3.4.2 Observation	100
3.4.3 Household interview	101
3.4.4 Official interview	101
3.4.5 Focus group discussion	104
3.5 Data analysis techniques	104
3.5.1 Quantitative analysis	104
3.5.2 Qualitative analysis	105
3.5.3 Quantitative and qualitative spatial analysis	105
3.6 Units of analysis	106
3.7 Validity test	106
3.7.1 External validity	106
3.7.2 Reliability	107
3.7.3 Internal validity	108
3.7.4 Construct validity	108
3.8 Limitations of the study.....	110
CHAPTER FOUR.....	112
FINDINGS AND DISCUSSION FOR SANGKRAH CASE STUDY.....	112
4.1 Overview	112
4.2 Overview of Sangkrah informal settlement.....	112

4.2.1 Location and administrative boundary	112
4.2.2 Rainfall and climatic condition	114
4.2.3 Socio-economic indicators	115
4.3 Sangkrah informal settlement as part of Bengawan Solo River basin	118
4.4 Exposure indicators	120
4.4.1 Location and nature of floods.....	121
4.4.2 Extent of floods (flood coverage).....	123
4.4.3 Flood depth and frequency	125
4.4.4 Population density	129
4.4.5 Flood duration	131
4.5 Susceptibility indicators	131
4.5.1 Past flood experience vs continuing staying in the village.....	131
4.5.2 Awareness of flood hazard.....	132
4.6 Causes of floods	133
4.6.1 Heavy rainfall and overflow of the river	133
4.6.2 Backwater lash	135
4.6.3 Informal housing development along the river	136
4.6.4 Poor solid waste disposal	137
4.6.5 Sedimentation of the Dam.....	138
4.7 Flood Effects and damage	140
4.7.1 Diseases.....	141
4.7.2 Disruption of social and economic activities.....	142
4.7.3 Blocked accessibility.....	143

4.7.4 Destruction of properties	144
4.8 Adaptation strategies at household level	145
4.8.1 Structural adaptation strategies	145
4.8.1.1 Protective walls (retaining walls)	146
4.8.1.2 Sandbags.....	148
4.8.1.3 Outdoor stairs	149
4.8.1.4 Raised plinth.....	150
4.8.1.5 Anjang Anjang (Emergence rooftop)	152
4.8.1.6 Use of water resistant materials.....	153
4.8.2 Non structural adaptation strategies at the household level	158
4.9 Adaptation strategies at the community level	158
4.9.1 Non physical adaptation strategies	159
4.9.1.1 Issuance of flood alert guidelines (Pedoman siaga banjir)	159
4.9.1.2 Disaster response training (pelatihan tanggap bencana).....	160
4.9.1.3 Citizens Economic Empowerment	161
4.9.1.4 Community participation into different activities	162
4.9.2 Physical adaptation strategies.....	162
4.9.2.1 Embankment.....	162
4.9.2.2 Dykes.....	164
4.9.2.3 Sewers and drainage channels	167
4.9.2.4 Wonogiri multipurpose dam.....	169
4.9.2.5 Relocation and vegetation cover	172
4.9.2.6 Public toilets and water supply.....	174

4.10 Flood management practices and institutions for flood management	176
4.11 Concluding remarks	182
CHAPTER FIVE.....	185
KEKO MACHUNGWA - FINDINGS AND DISCUSSION.....	185
5.1 Overview	185
5.2 Overview of Keko Machungwa	185
5.2.1 Location and administrative boundary	185
5.2.2 Rainfall and climatic condition	188
5.2.3 Socio-economic indicators	189
5.3 Keko Machungwa informal settlement as part of a river valley.....	193
5.4 Exposure indicators	195
5.4.1 Location and nature of floods.....	195
5.4.2 Extent of floods (flood coverage).....	197
5.4.3 Flood depth and frequency	200
5.4.4 Population density	201
5.4.5 Flood duration	202
5.5 Susceptibility indicators	203
5.5.1 Past flood experience vs continuing staying in the settlement	203
5.5.2 Awareness of flood hazard.....	205
5.6 Causes of floods	207
5.6.1 Backwater lash due to encroachment of a river valley	208
5.6.2 Informal housing development that leads to housing densification	213
5.6.3 Inadequate storm water drainage and waste water system	215
5.6.4 Haphazard dumping of solid waste	217

5.6.5 Infrastructure improvement in elevated surrounding settlements	218
5.7: Flood Effects and damage	218
5.7.1 Diseases.....	219
5.7.2 Water logging and blocked accessibility.....	221
5.7.3 Destruction of properties and disruption of economic activities.....	223
5.7.4 Water and air pollution.....	225
5.8 Adaptation strategies at household level.....	226
5.8.1 Structural adaptation strategies	227
5.8.1.1 Construction of protective (retaining) walls.....	227
5.8.1.2 Raised foundation and construction of raised stair cases	230
5.8.1.3 Raised pit latrines	232
5.8.1.4 Use of sandbags.....	233
5.8.1.5 Putting household items over stones or blocks.....	234
5.8.1.6 Draining water from the building premises using bucket and pipes	235
5.8.2 Non structural adaptation strategies	236
5.8.2.1 Temporarily shifting to other places (Seasonal displacement).....	236
5.8.2.2 Water boiling and treatment.....	238
5.9 Adaptation strategies at the community level	242
5.9.1 Structural adaptation strategies	243
5.9.1.1 Compensating and relocating flood victims	243
5.9.1.2 Facilitating supply of clean water.....	246
5.9.1.3 Facilitating construction of household and public toilets at a reasonable loan	247
5.9.1.4 Construction of foot bridges.....	248

5.9.1.5 Upgrading access roads	251
5.9.2 Non structural adaptation strategies	251
5.9.2.1 Initiating solid waste management practices	251
5.10 Flood management practices and institutions for flood disaster management	252
5.11 Concluding remarks	256
CHAPTER SIX.....	258
CROSS CASE ANALYSIS.....	258
6.1 Overview on cross case analysis	258
6.2 Exposure indicators	258
6.3 Causes of flooding.....	260
6.3.1 Informal housing development and poor solid waste management	260
6.3.2 Backwater lash	261
6.3.3 Factors external to the affected area.....	261
6.3.4 Rainfall intensity and river size	261
6.4 Effects of floods	262
6.4.1 Blocked accessibility	262
6.4.2 Destruction of properties	262
6.4.3 Water and foul smell	263
6.5 Adaptation strategies at the community level	263
6.5.1 Availability of infrastructure meant to prevent floods	263
6.5.2 Operation and maintenance of flood mitigation structures	264
6.5.3 Non structural adaptation strategies	265
6.5.4 Social systems	266
6.6 The technical suitability of adaptation strategies at household level	267

6.6.1 Availability of adaptation strategies.....	267
6.6.2 Construction material	269
6.6.3 Measurements of adaptation strategies (height)	272
6.6.4 The use of experts during design and construction stages.....	274
6.6.5 Maintenance	274
6.7 Effectiveness of institutions/local bodies for disaster management	275
6.8 Awareness on flood hazard and participation by the Government and Local Community	277
6.9 Participation of other stakeholders	278
6.10 Concluding remarks	279
CHAPTER SEVEN.....	283
THEORETICAL REFLECTIONS, CONCLUSIONS AND RECOMMENDATIONS	283
7.1 Overview on conclusion.....	283
7.2 Reflections from Collaborative Planning Theory.....	284
7.2.1 Cooperation	284
7.2.2 Democracy	285
7.2.3 Government involvement	286
7.2.4 Social learning processes.....	287
7.3 Reflections from Protection Motivation Theory (PMT)	288
7.3.1 High risk perception	288
7.3.2 Coping appraisal.....	290
7.3.3 Concluding remarks on PMT refocused theoretical reflections	290
7.4 Conclusions	291

7.5 Recommendations	293
7.5.1 Recommendations for Sangkrah informal settlement	294
7.5.2 Recommendations for Keko Machungwa informal settlement	298
7.5.3 Policy Implications.....	301
7.5.3.1 Enhance capacity of institutions, communities and social groups	301
7.5.3.2 Strengthening Policy and Legislation.....	302
7.5.3.3 Strengthening early warning system	302
7.5.3.4 Development of human resources in disaster management (Staffing)	303
7.5.3.5 Budgeting	303
7.5.3.6 Ensure supply of planned and surveyed land for housing development	304
7.5.3.7 Law enforcement in managing risky areas	305
7.5.3.8 Development of a guideline similar to FEMA guidelines.....	306
7.6 Areas for further research.....	306
7.6.1 Understanding the compensation and relocation process.....	307
7.6.2 Training for local artisans.....	307
7.6.3 Regional Disaster Management Agency (Badan Penanggulangan Bencana Daerah)	308
8.0: REFERENCES.....	309
9.0: APPENDICES	I
9.1 Appendix I: Questionnaires.....	I
9.2 Appendix II: Introductory Letters and Official travel Permit.....	XIV
9.3 Appendix 111: Published papers from this PhD work	XXII

List of Tables

Table 1.1: Knowledge gap matrix	9
Table 1.2: Research Objective and expected outcome	15
Table 1.3: Research objectives and research questions	16
Table 2.1: Dar es Salaam City rainfall from 2004 to 2013 as recorded at the Dar es Salaam Airport station	33
Table 3.1: Relevant situations for different research strategies	82
Table 3.2: Criteria for selecting case for in-depth study	87
Table 3.3: Final evaluation of the best case for in-depth study	88
Table 3.4: Criteria for selecting suitable sub-district for study	89
Table 3.5: Evaluation and selection of the sub-district for study	90
Table 3.6: Final evaluation of the best settlement (Kelurahan) for in-depth study	91
Table 3.7: Sample size calculation	93
Table 3.8: Performance indicators for Comparative analysis of the technical suitability of adaptation strategies and flood management between the two cases	98
Table 3.9 Resume of the objectives, research questions and methodology	99
Table 3.10: List of interviewed officials	102
Table 4.1: Flooded houses in Surakarta in 2007	114
Table 4.2: Number of people in the village (2010-2012)	115
Table 4.3: Income distribution of respondents	117
Table 4.4: Land uses in Surakarta in 2007	120
Table 4.5: Surakarta City rainfall from 1997 to 2007	128
Table 4.6: Population and population density in Sub districts of Surakarta in 2008	129
Table 4.7: Decline of reservoir storage capacity	139

Table 4.8: Perception on the causes of floods	140
Table 4.9: Water borne diseases in Sangkrah village	141
Table 4.10: Assessment of building materials in relation to vulnerability to floods	155
Table 4.11: Performance indicators for technical suitability of adaptation strategies	156
Table 4.12: Reported alternative sources of income during floods	158
Table 4.13: Community participation into different activities before, during and after flood.....	162
Table 4.14: Households affected by floods	172
Table 5.1: Significant floods in Dar es Salaam between 1983-2012.....	189
Table 5.2: Population growth rate	190
Table 5.3: Income distribution of respondents	192
Table 5.4: Respondents' views on the causes of floods	207
Table 5.5: Trends of different disease (February – May 2013).....	220
Table 5.6: Assessment of building materials in relation to vulnerability to floods..	240
Table 5.7: Performance indicators for technical suitability of adaptation strategies	241
Table 6.1: Comparison on exposure indicators across the two cases	259
Table 6.2: Comparison of adaptation strategies	268
Table 6.3: Proposed Time Release Model (TRM)	282
Table 7.1: Time release model for Sangkrah settlement	297
Table 7.2: Time release model (TRM) for Keko Machungwa settlement	300

List of Figures

Figure 1.1: Categories of Adaptation Strategies.....	21
Figure 2.1: The influence of urbanization on floods	25
Figure 2.2: Significant natural disasters that occurred in Indonesia from 1980 - 2010	30
Figure 2.3: Natural Disaster Occurrences in Tanzania from 1980-2010.....	31
Figure 2.4: Schematic overview of protection motivation theory	50
Figure 2.5: A framework for documenting flood hazard information.....	62
Figure 2.6: Conceptual framework for assessing the technical suitability of adaptation strategies to flooding.....	65
Figure 3.1: Flowchart Methodology.....	84
Figure 3.2: Convergence of evidence	109
Figure 4.1: Location map of Sangkrah village	113
Figure 4.2: Economic activities	116
Figure 4.3: Bengawan Solo River basin	118
Figure 4.4: Rivers traversing Sangkrah informal settlement.....	122
Figure 4.5: Flood coverage in Sangkrah Informal settlement	124
Figure 4.6: Extent of flooding in Surakarta in 1966 and 2007	125
Figure 4.7: Flooded areas along Bengawan Solo that requires relocation	127
Figure 4.8: Uncoordinated housing in Sangkrah settlement	130
Figure 4.9: Maximum height of water level and maximum discharge of Bengawan Solo River.....	135
Figure 4.10: Solid waste disposal methods used by surveyed households.....	138
Figure 4.11: Flood effects and damage in Sangkrah settlement.....	141

Figure 4.12: Adaptation strategies to flooding at household level	145
Figure 4.13: Dykes constructed to protect Sangkrah settlement from flood	165
Figure 4.14: Projection of effectiveness of Wonogiri Dam	170
Figure 4.15: Technical assistance in the form of site plan and house model	174
Figures 4.16: Flood management structure of Indonesia	178
Figure 4.17: Organization structure of BBWS	180
Figure 5.1: Location of Keko Machungwa Sub-ward	187
Figure 5.2: Proportion of income generating activities	192
Figure 5.3: Terrain of Keko Machungwa settlement.....	194
Figure 5.4: Existing Rivers traversing Keko Machungwa settlement	196
Figure 5.5: Flood coverage.....	199
Figure 5.6: Example of weather information disseminating by TMA through Jambo leo newspaper	206
Figure 5.7: Satellite image of Keko Machungwa before construction of the warehouses (in 2005).....	211
Figure 5.8: Satellite image of Keko Machungwa after construction of the warehouses (in 2012)	212
Figure 5.9: Effects of floods	219
Figure 5.10: Proportion of adaptation strategies to flooding as reported by respondents	227
Figure 5.11: Disaster management structure	254
Figure 6.1: The technical suitability variations of building foundation materials between the two case	269
Figure 6.2: Variations of floor building materials between the two cases	270
Figure 6.3: Variations of wall building materials between the two cases	272

Figure 6.4: Comparison on the height of adaptation strategies in relation to BFE ..	273
Figure 6.5: Pressure exposing Sangkrah and Keko Machungwa to flooding.....	280
Figure 6.6: Figure: Access and release of pressure in Sangkrah and Keko Machungwa informal settlements.....	281

List of Plates

Plate 2.1: Example of flash flooding caused by a combination of factors in Jakarta, capital of Indonesia, Jan. 16, 2013	28
Plate 2.2: Structural damage caused on the Mbezi Bridge	35
Plate 2.3: Worst floods at Msimbazi Valley in Dar es Salaam in December 2011	36
Plate 2.4: Environmental impact of flood in Indonesia	38
Plate 4.1: Respondent showing flood depth	126
Plate 4.2: Houses on the flood plain	136
Plate 4.3: Blocked accessibility	143
Plate 4.4: Houses destroyed by flooding	144
Plate 4.5: Protective walls at household level	146
Plate 4.6: Adaptation strategies at household level	150
Plate 4.7: Plinth raised in different ways and different materials	152
Plate 4.8: An emergence roof top (Anjang anjang)	153
Plate 4.9: Houses constructed from different types of materials	157
Plate 4.10: Disaster response	160
Plate 4.11: Citizens economic empowerment	161
Plate 4.12: Embankment walls constructed along Kali Pepe	163
Plate 4.13: Existing dykes in the village	166
Plate 4.14: Maintenance of the dyke	167
Plate 4.15: Sewers and drainage channels	169
Plate 4.16: Wonogiri multipurpose dam	171
Plate 4.17: Public toilets	175

Plate 4.18: Different types of wells existing in the village.....	176
Plate 4.19: Houses in poor condition.....	183
Plate 5.1: One of the respondent's houses surrounded by floodwater	201
Plate 5.2: Houses in risky environment	205
Plate 5.3: Encroachment of a river valley by Oil Com Company	210
Plate 5.4: Housing densification.....	214
Plate 5.5: Pipes from a pit-latrine directed to a stream.....	216
Plate 5.6: A shallow well close to a pipe from the pit-latrine	216
Plate 5.7: Heap of uncollected solid wastes	217
Plate 5.8: Water logging	222
Plate 5.9: Collapsed protective wall	224
Plate 5.10: Part of a destructed house.....	224
Plate 5.11: Protective walls	228
Plate 5.12: Raised stairs to provide access	232
Plate 5.13: Raised pit latrines	233
Plate 5.14: Household items kept over stones	235
Plate 5.15: Draining water from the building.....	236
Plate 5.16: Respondent showing a raised pit latrine changed to bedroom during floods	238
Plate 5.17: Ongoing relocation exercise	245
Plate 5.18: Supply of clean water	247
Plate 5.19: Household and public toilets	248
Plate 5.20: Foot bridges in different parts of the settlement.....	250

LIST OF ACRONYM

ACSEE	Advanced Certificate of Secondary Education
APFM	Associated Programme on Flood Management
AU/NEPAD	African Union/New Partnerships for African Development-
AURAN	African Urban Risk Analysis Network
BAPERMAS	Badan pemberdayaan masyarakat (head of community development).
BBWS	Balai Besar Wilayah Sungai-BBWS/BS
BBWS/BS	Balai Besar Wilayah Sungai Bengawan Solo
BFE	Base Flood Elevation
BMKG	Badan Meteorologi, Klimatologi, dan Geofisika (Indonesian Agency for Meteorology, Climatology and Geophysics)
BNPB	Badan Nasional Penanggulangan Bencana (National Disaster Management Agency)
BPBD	Badan Penanggulangan Bencana Daerah (Regional Disaster Management Agency)
BPS	Biro Pusat Statistic (Central Bureau of Statistics)
CBD	Central Business District
CCI	Centre for Community Initiative
CEE	Centre for Environment Education
CRED	Centre for Research on the Epidemiology of Disasters
CSEE	Certificate of Secondary Education Examination
DAWASCO	Dar es Salaam Water and Sewerage Corporation
DCC	Dar es salaam City Council (DCC)
DMA	Disaster Management Agency
DMD	Disaster Management Department
DMDP	Dar es Salaam Metropolitan Development Project

DPU	Department of Public Works (Pekerjaan Umum)
EM-DAT	Emergency events database
EPA	Environmental Protection Agency
ESCAP	Economic and Social Commission for Asia and the Pacific
EXCIMAP	European Exchange Circle on Flood Mapping
FEMA	Federal Emergency Management Agency
FGD	Focus Group Discussion
GIS	Geographic Information System
GIT	Geographic Information Technology
GWP	Global Water Partnership
HB	Haemoglobin
IFM	Integrated flood management
IPCC	Intergovernmental Panel on Climate Change
IFRC	International Federation of Red Cross and Red Crescent Societies
ISDR	International Strategy for Disaster Reduction
ITC	International Institute for Geo-Information Science and Earth Observation
ITCZ	Inter -tropical convergence zone
IWRM	Integrated Water Resources Management
JICA	Japanese International Cooperation Agency
Km	Kilometer
MDGs	Millennium Development Goals
MGT	Management
MLHHS	Ministry of Lands, Housing and Human Settlement Development
MPW	Ministry of Public Works
NADMAC	National Disaster Management Committee
NGO	Non Government Organizations

OECD	Organization for Economic Co-operation and Development
PDAM	Perusahaan Daerah Air Minum (Regional water company)
PMI	Palang Merah Indonesia (Indonesian Red Cross)
PMO	Prime Minister's Office
PMT	Protection Motivation Theory
RT	Rukun Tetangga (Neighborhood Unit).
RW	Rukun Warga (Community Unit)
SMERU	Social Monitoring and Early Response Unit
TAN-DREC	Tanzania Disaster Relief Committee
TANESCO	Tanzania Electric Supply Company
TMA	Tanzania Meteorological Agency
TMC	Temeke Municipal Council
TNI	Tentara Nasional Indonesia (Indonesian Armed Forces)
TPDF	Tanzania People's Defence Forces
TVs	Televisions
UN	United Nations
UN/ISDR	United Nation/International Strategy for Disaster Reduction
UNCHS	United Nations Centre for Human Settlements
UNDP	United Nations Development Programme
UNEP	United Nations Environmental Programme
UNS	Universitas Negeri Surakarta (University of Surakarta)
URT	United Republic of Tanzania
USD	United States' Dollar
UTI	Urinary Track Infection
VAT	Value Added Tax
VDRL	Venereal Disease Research Laboratory (Syphilis)

WFD	Water Framework Directives
WHO	World Health Organization
WMO	World Meteorological Organization
